Blass, 2013-06-29 In our attempts to interrogate Nature about the development of the nervous

system we ask such questions as How do the nerve cells originate and how do the correct types of cells differentiate at their correct positions how do the neurons link together to form circuits whose functions are properly coordinated and how are the functions of nerve cells related to behavior to thought and to consciousness Those problems are intellectually challenging not only because solving them would give us practical advantages but also because while they remain unsolved they stimulate the imagination and challenge the intelligence It is precisely because they are difficult and controversial and have defied complete solution that such problems continue to attract subtle minds The understanding that we now have of neural ontogeny seems to me to be farther from complete knowledge than from total ignorance Nonetheless it gives us a slightly elevated position from which to survey the vicissitudes of the past to appraise our present understanding and to consider ways in which our knowledge might develop in the future The history of this subject affords a particularly piquant illustration of Arthur Lovejoy's comment that the adequate record of even the confusions of our forebears may help not only to clarify those confusions but to engender a salutary doubt whether we are wholly immune from different but equally great confusions
