Infiltration - the movement of surface water into rock or soil through cracks and pore spaces.

Bed Load - the part of a stream's load of solid material that is made up of sediment too large to be carried in suspension.

Delta - an accumulation of sediment formed where a stream enters a lake or ocean

Divide - an imaginary line that separates the drainage basin of one stream from another

Porosity - the percentage of the total amount of rock or soil that consists of pore space.

Permeability - a material's ability to release a fluid.

Sinkhole - a depression produced in a region where groundwater has removed soluble rock.

Artesian Well - any formation in which groundwater rises on its own under pressure

Well - a hole bored into the zone of saturation

Transpiration - plants absorb water and release it into the atmosphere

Capacity - the maximum load a stream can carry

Floodplain - the side-to-side cutting of a stream eventually producing a flat valley floor

2.) Where/How do springs form? Naturally flowing ground water reaches the surface of the Earth

3.) What is a major cause of floods? Rapid spring melting of snow, heavy rainfall over a long time

4.) How do caverns form? Hollowed out by erosion from underground streams

5.) What is the base level of a stream? The bottom level of a stream where it flows into another, larger body of water

6.) What is the gradient of a stream? The slope of a stream

7.) Which US river has the largest drainage basin? Mississippi

8.) How are sinkholes formed? Area where ground water has removed the rock

9.) How are geysers formed? A hot spring where water shoots out intermittently due to a build up of pressure under the ground

10.) How is the water cycle balanced? Explain. The amount of water in the air from evaporation and transpiration equals the amount of water that condenses and falls back to Earth as precipitation

11.) What is the discharge of a stream? How does it increase? How much water a stream can move in one second over a certain distance; increase speed or depth of the stream

12.) A steep gradient causes the discharge to be _____, increased

13.) What are the different types of loads that a stream can carry? Solution – stuff that's dissolved in the water; suspension – stuff that's floating in the water; scooting/rolling – stuff that's pushed/rolled along the bottom due to the movement of the water

14.) Explain a drainage basin. Land area that contributes water to a stream/river; we are in the Yadkin/Pee-Dee river basin

15.) Where do you find groundwater? Groundwater is found beneath the Earth's surface in soil pore spaces and in the fractures of rock formations.
