Neuroanatomy and the Neurologic Exam TerenceR. Anthoney,2017-11-01 In this book Neuroanatomy and the Neurologic Exam is an innovative comprehensive thesaurus that surveys terminology from neuroanatomy and the neurologic examination as well as related general terms from neurophysiology neurohistology neuroembryology neuroradiology and

neuropathology The author prepared the thesaurus by examining how terms were used in a large sample of recent widely used general textbooks in basic neuroanatomy and clinical neurology These textbooks were written by experts who received their primary professional training in 13 different countries allowing the thesaurus to incorporate synonyms and conflicting definitions that occur as a result of variations in terminology used in other countries The thesaurus contains Examination Papers Queen's University (Kingston, Ont.),1921

Teratological Testing T.V.N. Persaud,2012-12-06 The study of birth defects has assumed an importance even greater now than in the past because mortality rates attributed to congenital anomalies have declined far less than those for other causes of death such as infectious and nutritional diseases It is estimated that as many as 50% of all pregnancies terminate as miscarriages In the majority of cases this is the result of faulty development Major congenital malformations are found in at least 2% of all liveborn infants and 22% of all stillbirths and infant deaths are associated with severe congenital anomalies Teratological studies of an experimental nature are neither ethical nor justifiable in humans Numerous investigations have been carried out in laboratory animals and other experimental models in order to improve our understanding of abnormal intra uterine development In less than two decades the field of experimental teratology has advanced phenomenally As a result of the wide range of information that is now accumulating it has become possible to obtain an insight into the causes mechanisms and prevention of birth defects However considerable work will be needed before these problems can be resolved The contributions in this volume deal primarily with the areas of teratological evaluation and the use of selected animal models for the study of congenital anomalies It is not only a documentation of the latest experimental work but it also indicates new and important areas for future research
