Jacobs Consultancy's Asset Management Practice provides consulting services in all aspects of Asset Management, Reliability and Maintenance performance improvement.

Asset Management (AM) is a specialised business discipline that delivers the desired level of service throughout the asset life cycle whilst managing cost, integrity, safety and assurance.

We work with our clients to ensure their assets deliver maximum return on investment throughout all phases of the asset life including strategic planning, concept, design, construction, operation, maintenance, life-time extension and asset retirement.

By working in collaboration with our clients, we develop targeted solutions to meet their business needs and provide strategies to optimise the overall effectiveness of the asset, drive down costs and improve reliability throughout the asset life.

Jacobs Asset Management Delivery Model

Our AM Delivery Model focuses on providing value at all phases of the Asset Life Cycle. The model comprises 8 categories within which we have developed a suite of best practice Modules applicable across the Asset Life Cycle.

The AM Modules have been developed as frameworks and include methodologies and guidance for addressing specific needs. They can be used individually or as part of a comprehensive implementation program and include best practice activities such as Strategic Development, Assessment, RAM analysis, TCAD analysis, Maintenance Strategy, Risk Based Methodologies, and Spare Optimisation, to name a few.

Recent Asset Management projects include:

- **Business Plan Management:** We provided consulting services for a client looking to increase a full-sized refinery from Europe to Far East. We identified business risk and put in place mitigation strategies.
- **Reliability Centred Engineering:** We recently provided design integrity services for a FCCC gasification project in Canada. We identified RAM needs, analysed CAPEX / Operating trade-offs to maximise TQ&O.
- **Turnaround Effectiveness:** We provided turnaround management and work processes support for the management of a European Refinery, where by applying the various improvement methodologies, the client was able to reduce the duration of the event by 2 days.
- **Operational Excellence:** We supported a European client with the assessing the correct staffing level and by developing the optimal operational organization for their two chemical plants.
- **Reliability Practices:** We led a failure analysis for an offshore crude oil supply system for a North American client and assessed many failure failure modes and we risk-ranked the findings.
- **Maintenance Optimisation:** We worked with a refining client to review their maintenance activities and developed a Road Map for improvement.
