Mathematics Manual for Water and Wastewater Treatment Plant Operators: Water Treatment Operations Frank R. Spellman, 2023-07-31 To properly operate a waterworks or wastewater treatment plant and to pass the examination for a waterworks wastewater operator's license it is necessary to know how to perform certain calculations. All operators at all levels of licensure need a basic understanding of arithmetic and problem solving techniques to solve the problems they typically encounter in the workplace. Hailed on its first publication as a masterly account written in an engaging, highly readable, user-friendly style, the fully updated *Mathematics Manual for Water and Wastewater Treatment Plant Operators: Water Treatment Operations* covers all the necessary computations used in water treatment today. It presents math operations that progressively advance to higher, more practical applications, including math operations that operators at the highest level of licensure would be expected to know and perform. Features: Provides a strong foundation based on theoretical math concepts which it then applies to solving practical problems for both water and wastewater operations. Updated throughout and with several new practical problems added. Provides illustrative examples for commonly used waterworks and wastewater treatment operations covering unit process operations found in today's treatment facilities. *Manual of Standard Operating Procedures for Selected Chemical Residue and Contaminant Analysis* Food and Agriculture Organization of the United Nations, International Atomic Energy Agency, 2021-09-15 Food safety is an important global public health and trade matter with chemical hazards occupying centre stage due to associated acute and chronic health outcomes. There is also an increasing need to address antimicrobial resistance concerns. While food remains a major vehicle for exposure to these hazards, related matrices cannot be ignored. Animal feed, for instance, may contain drug or pesticide residues as well as mycotoxins that could carry over to food either as parent compounds or their metabolites of toxicological relevance. Contaminated water is also another medium of potential exposure to food hazards. A concerted effort is required to address the need for a safe food supply and one critical stakeholder is the testing laboratory. While this requires trained and capable analysts as well as reliable instrumentation, analytical methods are a major need. Development and validation to ensure fitness of purpose and availability of these methods is a necessity. This manual, consisting of several Standard Operating Procedures (SOPs), presents another opportunity for laboratories to address gaps in analytical methods and/or expand their options. The manual contains techniques for analyzing certain mycotoxins such as aflatoxins, fumonisin, and ochratoxin in matrices that include milk, edible vegetable oil, and animal feed, etc. A range of veterinary drug residues, including permitted and prohibited substances in animal matrices including fish, are also addressed. Several pesticide residues in cereals, fruits, and vegetables are also covered. A couple of methods for analysis of selected metals are also presented.
