- Intrinsically safe (IS) architecture per IEC 61508
- Integrated gateway modules per channel
- Optimized process reliability
- Simplified safety lifecycle management
- Flexibility to meet project needs
- Reduced installed cost of system
- Field-mounted capacitor hardware

Introduction

The DeltaV SIS process safety system has uniquely evolved modular architecture that is based on the Emerson's proven logic solver (PLC) and the proven DeltaV marshalling architecture of the Emerson Process Management Marshalling solutions. With the Emerson SIS processing, the DeltaV logic solver and gateway are single hardware. The PLC supports up to 16 individually-configurable channels, allowing flexibility for programming safety instrumented functions and to design specifically the architecture to meet the DeltaV system architecture. Microprocessors are completely reloaded from the channel (PLC) memory to the PLC. Integrated power supply and logic components are in the PLC.

The system architecture offers full project lifecycle, provides significant savings in system design, installation, and even of maintenance required throughout the marshalling with the addition of the DeltaV safety architecture. The system's design and architecture minimizes the required hardware and the associated safety related wiring and the process related and achieves significant cost savings.

The DeltaV SIS process safety system has the proven DeltaV logic solver, using the proven IS architecture to increase the reliability of the safety architecture. It also is combined with the advantages of the Emerson DeltaV marshalling architecture using the DeltaV architecture.
