**Foreign Language Learning with Digital Technology** Michael Evans, 2009-02-07 While digital technology is endlessly innovating and improving itself as a tool to support teaching and learning the cognitive process of language learning itself remains perennially the same However digital technology has created new learning opportunities and introduces new elements into the cognitive process of foreign language learning The contributors of this well edited collection examine foreign language learning primarily from a user perspective and explore these underlying questions How does digital technology support existing foreign language learning needs and processes What new learning experiences does it entail for the learner The book situates new insights into the value of digital technology for foreign language learning within the context of evidence from prior research and of educational policy making and examines key pedagogical uses of digital technology in relation to effective foreign language learning by pupils It provides an in depth description of the use of a range of digital media and combines practical ideas for teaching and learning with critical analysis of evidence drawing on an analysis of technology focused language learning across different sectors and in different anglophone contexts

*Brave New Digital Classroom* Robert J. Blake, 2008 *Brave New Digital Classroom* deftly interweaves results of pedagogical research and descriptions of the most successful computer assisted language learning CALL projects to explore how technology can best be employed in the foreign language curriculum to assist the second language acquisition process Directed to all language teachers whether at the school or the postsecondary level with or without prior experience this book focuses on how to use new technologies effectively Blake urges teachers to move beyond a simple functional competence of knowing how to use the tools toward first a critical competence realizing what the various tools are good for and ultimately a rhetorical competence of knowing how the tools will help transform the learning

environment This book examines the effective use of a range of technologies from Internet sites through computer mediated communication such as synchronous chatting and blogs to distance learning At the end of each chapter questions and activities demonstrate the interactionist learner centered pedagogy Blake espouses An invaluable reference for experienced researchers and CALL developers as well as those of limited experience Brave New Digital Classroom is also ideal for graduate level courses on second language pedagogy It will also be of interest to department chairs and administrators seeking to develop and evaluate their own CALL programs *English Learning in the Digital Age* Shuang Zeng, 2018-11-23

Moving beyond the Web 2.0 and digital native rhetoric this book addresses the complex experiences of learners of English as a foreign language EFL in a world embedded with interactive and participatory technologies Adopting a sociocultural perspective it investigates EFL learners behaviours concerning digital technology and guides exploration into their contextually mediated choices and learning practices in the 2.0 era The argument is developed on the basis of the findings of a mixed sequential study that focused on 1485 Chinese undergraduates use and non use of online tools and applications outside the English classroom Particular attention is paid to the role of context and agency when understanding their learning choices and behaviours in the context of digital technology In particular the book acknowledges the explanatory power of agency in the minority instances of good practices among these EFL learners At the same time it demonstrates that for most learners use of the current web is limited and mostly non interactive The barriers to 2.0 transfer are largely contextual and the so called communicative opportunities and participatory culture in particular did not fit into the learners sociocultural context of language learning Overall the compelling argument proposes that the technology facilitated changes in EFL practices are a bottom up process that is taking place in day to day situations and constrained by the learning context within which the learner is situated Based on these arguments the book provides a framework that challenges the existing beliefs about language learning with online technology and that contributes to our understanding of how context mediates EFL learners behaviours surrounding digital technologies It is a valuable resource for teachers researchers and policy makers providing them with insights into using digital technology to stimulate good learning practices outside the classroom
