For each function, analyzing monotonicity and extrema, that will be the procedure for determining the values of the function (value) & choose the x value(s) that, give us the maximum/minimum values. This gives us some information about the function but doesn't tell us about what shape a function will take (as the picture) as the graph.

For each graph, determine the function $f(x)$ as continuous on the right, then $f(x)$ is not continuous at $x=a$ because $f(a)$ is not defined, so it must be either right or left continuous (give choice). If function is continuous at $x=a$ must be either right, the graph doesn't change.

Graphing $f(x)$ and $f'(x)$ shows a continuous function, but the function $f(x)$ is not continuous at $x=a$ because the graph shows a jump.

Below is how about the shape, either tangent lines at $x=a$ the discontinuity at $x=a$ or there period.
