Reconstruction Gengsheng Lawrence Zeng, 2017-03-20. This book introduces the classical and modern image reconstruction technologies. It covers topics in two dimensional 2D parallel beam and fan beam imaging; three dimensional 3D parallel ray parallel plane and cone beam imaging. Both analytical and iterative methods are presented. The applications in X ray CT, SPECT, single photon emission computed tomography, PET, positron emission tomography and MRI magnetic resonance imaging are discussed. Contemporary research results in exact region of interest ROI reconstruction with truncated projections, Katsevich's cone beam filtered backprojection algorithm and reconstruction with highly under sampled data are included. The last chapter of the book is devoted to the techniques of using a fast analytical algorithm to reconstruct an image that is equivalent to an iterative reconstruction. These techniques are the author's most recent research results. This book is intended for students, engineers and researchers who are interested in medical image reconstruction. Written in a non mathematical way, this book provides an easy access to modern mathematical methods in medical imaging.
