Handbook of Research on Empowering Early Childhood Educators With Technology Burris, Jade, Rosen, Dina, Karno, Donna, 2021-06-18 Computers and mobile technologies have become widely adopted as sought after tools in the field of education. The prevalence of technology in early childhood education (ECE) is increasing and teachers both pre-service and in-service are using best practices to integrate tools effectively to improve teaching and learning within the field. This includes settings such as childcare centers, family childcare, and community programs that have both educators and administrators adapting to the use of technology. Therefore, it has become critical to research and explore the best practices of technology integration and successful strategies to improve the use of technology in ECE. The *Handbook of Research on Empowering Early Childhood Educators With Technology* examines best practices that focus specifically on those that facilitate the development of competencies in teaching young children birth to age 8 and technology integration. The chapters include information on the foundations of technology in early childhood education, content-specific technology applications, developmentally appropriate practices (DAP) for learners using technology, and how to meet diverse learner needs with technology. The target audience for this book is early childhood professionals, teacher educators, pre- and in-service teachers in early childhood settings, faculty, and researchers in the field of education, instructional technologists, childcare and elementary school administrators, early education policy organizations, and advocacy groups that are interested in the best practices and successful strategies for implementing technology in ECE.

VET Boost: Towards a Theory of Professional Competencies, 2009-01-01 The themes of the different papers in this book are related to five major areas of research. First, the book presents the work on a large-scale assessment in vocational and occupational education and training. Reason was the work of Frank Achtenhagen and his colleagues on the preparation of a VET PISA which started in 2004, which has now become more and more a concrete program. The contributions to this part of the book contain a project description and profound presentations and discussions of measurement and evaluation problems. It reflects also the work of Achtenhagen with respect to item response theory, measurement, and testing. The second part of this book presents a unique endeavour of promoting VET research. The Swiss Federal Office for Professional Education and Technology (OPET) initiated a program of Leading Houses of VET which are dedicated to different important research topics. This program might serve as an example for comparable approaches in other countries. The third part highlights central issues of research on learning processes, curriculum theory, and the use of technology. Here, the work of Achtenhagen on competence profile modelling, competence measurement, and instructional and curriculum designing is touched. The fourth part stresses social and emotional learning as important aspects of VET learning. The fifth part considers the political and institutional dimensions of VET research which have to be taken into account when an international large-scale assessment of VET shall be getting started. Achtenhagen's work on learning at work, learning in economics, and learning under the conditions of institutional modelling are discussed. The

whole book is a collection of central issues around a field that is not yet taken enough into consideration in educational research but pushed and supported by Frank Achtenhagen VET research He belongs to the founding fathers of it and this is why precisely the book reflects new trends and new concepts with respect to the question What can we educational psychologists and educational researchers learn from a rich and central research field
