

**Assumptions:**

1. The container is cylindrical in shape and supported on two knife edges, each at a distance of  $(1/3)L$  (where  $L$  is the diameter of the container cross section) from the base circle center or  $(2/3)L$  apart.
2. The friction forces between the contacting bodies are negligible.
3. The sphere and containers are in static equilibrium.
4. The force of gravity is the only body force.

**Analysis:**

1. From the free body diagram for A,  $D = \left[ \frac{1000}{\sin \theta} \right] \text{ N}$ ,  $C = \left[ \frac{1000}{\tan \theta} \right] \text{ N}$ .
2. From the free body diagram for B,  $E = \left[ \frac{1000}{\tan \theta} \right] \text{ N}$ ,  $F = 1125 \text{ N}$ .

3. From the above diagram and the free body diagram for C, the forces  $G$  and  $H$  can be obtained.

**Comments:**

1. The geometry of the container must be clearly determined before proceeding to solve this problem. For example, if the container is assumed to be rectangular in shape, then the spheres would not be in stable equilibrium. Also, until the container shape is defined it is impossible to draw the free body diagram.
2. The container should be supported such that it is in stable equilibrium. To consider the container as a free body, all the forces from the surroundings acting on the body must be shown.
