Requiring no more than a knowledge of high school mathematics and written in clear and accessible language this book will give all readers a new insight into some of the most enjoyable and fascinating aspects of geometry Everyone knows what a triangle is yet very few people appreciate that the common three sided figure holds many intriguing secrets For example if a circle is inscribed in any random triangle and then three lines are drawn from the three points of tangency to the opposite vertices of the triangle these lines will always meet at a common point no matter what the shape of the triangle This and many more interesting geometrical properties are revealed in this entertaining and illuminating book about geometry Flying in the face of the common impression that mathematics is usually dry and intimidating this book proves that this sometimes daunting abstract discipline can be both fun and intellectually stimulating The authors two veteran math educators explore the multitude of surprising relationships connected with triangles and show some clever approaches to constructing triangles using a straightedge and a compass Readers will learn how they can improve their problem solving skills by performing these

triangle constructions The lines points and circles related to triangles harbor countless surprising relationships that are presented here in a very engaging fashion *The Geometry of Homological Triangles* Florentin Smarandache, Ion Patrascu, Smarandache, 2011 **The Modern Geometry of the Triangle** William Gallatly, 2012-08-01 Unlike some other reproductions of classic texts 1 We have not used OCR Optical Character Recognition as this leads to bad quality books with introduced typos 2 In books where there are images such as portraits maps sketches etc We have endeavoured to keep the quality of these images so they represent accurately the original artefact Although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy A Second Year Geometry V.
