Stroyan, 1998-11-03 Projects for Calculus is designed to add depth and meaning to any calculus course The fifty two projects presented in this text offer the opportunity to expand the use and understanding of mathematics The wide range of topics will appeal to both instructors and students Shorter less demanding projects can be managed by the independent learner while more involved in depth projects may be used for group learning Each task draws on special mathematical topics and applications from subjects including medicine engineering economics ecology physics and biology Subjects including Medicine Engineering Economics Ecology Physics Biology Exploring Geometry Michael Hvidsten, 2016-12-08 Exploring Geometry Second Edition promotes student engagement

with the beautiful ideas of geometry Every major concept is introduced in its historical context and connects the idea with real life A system of experimentation followed by rigorous explanation and proof is central Exploratory projects play an integral role in this text Students develop a better sense of how to prove a result and visualize connections between statements making these connections real They develop the intuition needed to conjecture a theorem and devise a proof of what they have observed Features Second edition of a successful textbook for the first undergraduate course Every major concept is introduced in its historical context and connects the idea with real life Focuses on experimentation Projects help enhance student learning All major software programs can be used free software from author *Summaries of Projects Completed* National Science Foundation (U.S.), **NASA Thesaurus** ,1988 **Summaries of Projects Completed in Fiscal Year ...** National Science Foundation (U.S.),1979 *Summaries of Projects Completed in Fiscal Year ...* ,1978 A First Course in Projective Geometry Edward Howard Smart,1913 **Alturas 345 Kilovolt (kv) Electric Power Transmission Line Project, Sierra Pacific Power Company, Susanville District, Modoc County, Lassen County, Sierra County [CA], Washoe County [NV]** ,1995 *Introduction to Geometric Computing* Sherif Ghali,2008-07-05 Computing is quickly making much of geometry intriguing not only for philosophers and mathematicians but also for scientists and engineers What is the core set of topics that a practitioner needs to study before embarking on the design and implementation of a geometric system in a specialized discipline This book attempts to find the answer Every programmer tackling a geometric computing problem encounters design decisions that need to be solved This book reviews the geometric theory then applies it in an attempt to find that elusive right design APS/SDG&E Interconnection Project (AZ,CA) ,1981 *In a Class of Your Own* Rhoda M. Lovett,2022-07-05 When a student of mathematics studies abstract algebra he or she inevitably faces questions in the vein of What is abstract algebra or What makes it abstract Algebra in its broadest sense describes a way of thinking about classes of sets equipped with binary operations In high school algebra a student explores properties of operations and on real numbers Abstract algebra studies properties of operations without specifying what types of number or object we work with Any theorem established in the abstract context holds not only for real numbers but for every possible algebraic structure that has operations with the stated properties This textbook intends to serve as a first course in abstract algebra The selection of topics serves both of the common trends in such a course a balanced introduction to groups rings and fields or a course that primarily emphasizes group theory The writing style is student centered conscientiously motivating definitions and offering many illustrative examples Various sections or sometimes just examples or exercises introduce applications to geometry number theory cryptography and many other areas This book offers a unique feature in the lists of projects at the end of each section the author does not view projects as just something extra or cute but rather an opportunity for a student to work on and demonstrate their potential for open ended investigation The projects ideas come in two flavors investigative or expository The investigative projects briefly present a topic and posed open ended questions that invite the student to explore the topic asking and to trying to answer their own questions Expository projects invite the student to explore a topic with algebraic content or pertain to a particular mathematician s work through responsible research The exercises challenge the student to prove new results using the theorems presented in the text The student then becomes an active participant in the development of the field
