

4.1 KEYS USED FOR MANUAL OPERATION

The robot is manually operated when:

- Moving the robot to the position to teach.
- Moving the robot arm when an error occurs.

The explosion-proof teach pendant is used for manual operation of the robot.
Hold the teach pendant firmly with both hands.

The following keys are mainly used for manual operation:

- Coordinates selection key, Equipment selection key, Axis key, Manual speed key, Teach lock key, Trigger switches.

Robotics and Automation Handbook Thomas R. Kurfess, 2018-10-03 As the capability and utility of robots has increased dramatically with new technology robotic systems can perform tasks that are physically dangerous for humans repetitive in nature or require increased accuracy precision and sterile conditions to radically minimize human error The Robotics and Automation Handbook addresses the major aspects of designing fabricating and enabling robotic systems and their various applications It presents kinetic and dynamic methods for analyzing robotic systems considering factors such as force and torque From these analyses the book develops several controls approaches including servo actuation hybrid control and trajectory planning Design aspects include determining specifications for a robot determining its configuration and utilizing sensors and actuators The featured applications focus on how the specific difficulties are overcome in the development of the robotic system With the ability to increase human safety and precision in applications ranging from handling hazardous materials and exploring extreme environments to manufacturing and medicine the uses for robots are growing steadily The Robotics and Automation Handbook provides a solid foundation for engineers and scientists interested in designing fabricating or utilizing robotic systems

Robotics in Practice Joseph F. Engelberger, 2012-12-06 THE REAL THING by Isaac Asimov Back in 1939 when I was still a teenager I began to write and publish a series of stories about robots which for the first time in science fiction were pictured as having been deliberately engineered to do their job safely They were not intended to be creaky Gothic menaces nor outlets for mawkish sentiment They were simply well designed machines Beginning in 1942 I crystallized this notion in what I called The Three Laws of Robotics and in 1950 nine of my robot stories were collected into a book I Robot I did not at that time seriously believe that I would live to see robots in action and robotics becoming a booming industry Yet here we are better yet I am alive to see it But then why shouldn't they be with us Robots fulfil an important role in industry They do simple and repetitive jobs more steadily more reliably and more uncomplainingly than a human being could or should Does a robot displace a human being Certainly but he does so at a job that simply because a robot can do it is beneath the dignity of a human being a job that is no more than mindless drudgery Better and more human jobs can be found for human beings and should

Creating Brain-Like Intelligence Bernhard Sendhoff, Edgar Körner, Olaf Sporns, Helge Ritter, Kenji Doya, 2009-03-13 The International Symposium Creating Brain Like Intelligence was held in February 2007 in Germany The symposium brought together notable scientists from different backgrounds and with different expertise related to the emerging field of brain like intelligence Our understanding of the principles behind brain like intelligence is still limited After all we have had to acknowledge that after tremendous advances in areas like neural networks computational and artificial intelligence a field that

had just celebrated its 50 year anniversary and fuzzy systems we are still not able to mimic even the lower level sensory capabilities of humans or animals We asked what the biggest obstacles are and how we could gain ground toward a scientific understanding of the autonomy exhibit and robustness of intelligent biological systems as they strive to survive New principles are usually found at the interfaces between existing disciplines and traditional boundaries between disciplines have to be broken down to see how complex systems become simple and how the puzzle can be assembled During the symposium we could identify some recurring themes that pervaded many of the talks and discussions The triad of structure dynamics and environment the role of the environment as an active partner in shaping systems adaptivity on all scales learning development evolution and the amalgamation of an internal and external world in brain like intelligence rate high among them Each of us is rooted in a certain community which we have to serve with the results of our research Looking beyond our elds and working at the interfaces between established areas of research requires effort and an active process
