feasibility Aims of this topic include the following 1 Identify specific interventions to facilitate the elimination of food borne pathogens in poultry 2 Develop nutritional strategies to reduce food borne colonization in poultry and reduce prevalence of food borne pathogens in poultry products Increasing numbers of poultry are raised without antibiotics There is growing attention to using dietary supplements to replace antibiotics to alter intestinal microbial populations to stimulate antioxidative and immune systems and to improve overall intestinal health This Research Topic will include a focus on determining the viability of nutritional intervention like probiotics and non antibiotic growth promoters alone or in combination as a means to mitigate food borne contamination particularly in the context of an antibiotic free setting Particular attention will be paid in determining the effects of dietary supplements on intestinal integrity gene expression antioxidative systems and pro inflammatory cytokines Reviews and research papers among other article types on all aspects of the interactions between nutrition physiology and microbiology in birds particularly poultry

Nutrition Regulation and Stress in Ruminant Xianwen Dong, Juncai Chen, Rui Hu, Zheng Zhou, 2024-07-30 Stress is an abnormal response of the organism to external environmental stimuli In the process of breeding production animals will show various stress reactions due to changes in their physiological functions environmental conditions and management levels Transportation high temperature cold and other stressors could induce protective reactions in the animal body showing obvious physiological metabolic disorders and non specific immune dysfunction disrupting the physiological processes of nutrient metabolism digestion and absorption and immune defense and ultimately leading to a decrease in production performance and feed conversion rate

Nutraceuticals in Cardiovascular Diseases and their Associated Risk Conditions Naufal Zagidullin, Lamiaa A. Ahmed, Fan Yang, 2024-09-19 Cardiovascular diseases and their associated risk conditions including dyslipidemia hypertension and diabetes are one of the main health issues worldwide The mechanisms underlying cardiovascular disorders are complex and multifactorial including oxidative stress inflammation and mitochondrial dysfunction as well as modulating the activities of several kinases and phosphatases Importantly pharmacotherapies available for the management of these diseases are considered insufficient and show several limitations and side effects especially in high risk patients

Nutraceuticals are bioactive food components or phytochemicals that provide benefits including the prevention or treatment of several diseases Nutraceuticals such as flavonoids vitamins and other natural substances have shown pleiotropic antioxidant and anti inflammatory properties

Environmental Health Perspectives, 1999 *Cells, Biomaterials, and Biophysical Stimuli for Bone, Cartilage, and Muscle Regeneration, volume II* Lorenzo Fassina, Nora Bloise, Murugan

Ramalingam, Livia Visai, 2024-05-28 This Research Topic is Volume II of the article collection Cells Biomaterials and Biophysical Stimuli for Bone Cartilage and Muscle Regeneration Over the last few years a variety of tissue engineering

strategies have been developed to improve the regeneration of bone cartilage and skeletal muscle. Numerous studies have proven that physical factors, external mechanical forces, and biomaterials features, as well as biochemical factors, may induce cells to reprogram their functions and dynamically adapt to the cellular microenvironment conditions. The advances in understanding the role of biophysical cues in the stem cells microenvironment point out the importance of their application in biomedicine and biotechnology to drive and modulate cell behavior for therapeutic purposes. In this context, many efforts are dedicated to design different strategies to engineer the physical aspects of the natural cellular microenvironment. The development of these technologies may be useful for identifying and studying the physical factors and help to clarify their downstream mechanisms to control cell behavior. This Research Topic will promote an overview of recent advances and cutting edge approaches based on primary cells, stem cells, extracellular vesicles (EVs), biomaterial scaffolds, bioreactors, biophysical stimuli, e.g. mechanical forces, electromagnetic waves, and biochemical cues. All research involving one or more of the aforementioned cells and methods is welcome to elucidate new basic research findings, e.g. molecular insights, biochemical pathways toward regeneration, and possible new clinical strategies, e.g. bioreactors for cell factories. An interdisciplinary design, e.g. biology, biochemistry, plus bioengineering, is very welcome.
