AIDS and Women's Reproductive Health Lincoln C. Chen, Jaime Sepulveda Amor, Sheldon J. Segal, 2012-12-06 Over the past decade the AIDS pandemic has propagated so widely and exerted such a devastating impact that one may properly ask the question Why not concentrate all AIDS efforts on disease control alone Why link AIDS with women's reproductive health What is the scientific basis for this linkage And how might AIDS control and women's health objectives be promoted simultaneously These questions constitute the principal themes addressed in this monograph The 15 chapters in this volume are intended to provide state of the art reviews of key interactions between AIDS and women's reproductive health for an audience of scientists and policy makers in the AIDS and population fields Impetus for this monograph comes in part from what we perceive to be an inadequate global response thus far to AIDS and women's health problems A common platform has failed to emerge among the disparate professional communities working in the areas of AIDS STDs and family planning As a result endeavors in these fields have been isolated and opportunities for joint action have been missed An enormous and as yet unharnessed potential exists for powerful interdisciplinary collaborations that could strengthen policies and programs against these pressing health problems of humankind
