

MEI Mechanics 2

A Model for Friction

Section 1: Friction

Notes and Examples

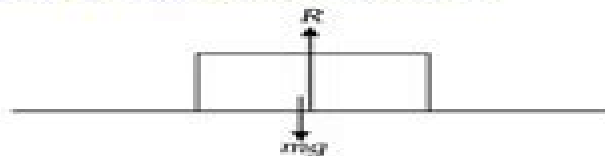

These notes contain subsections on

- [A model for friction](#)
- [Modelling with friction](#)

Look at the discussion point at the foot of page 1. As the motorcyclist was skidding, the wheels of the motorcycle were sliding along the road. Think about what forces were acting on the motorcycle, and what assumptions you need to make.

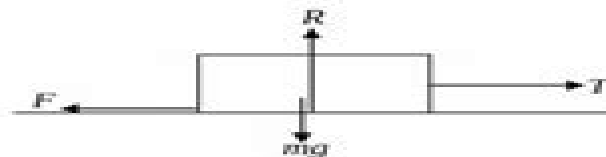

A model for friction

It is important to realise that the size of the frictional force between two surfaces varies according to circumstances. For example, consider a block of mass m kg resting on a rough horizontal plane.

The only forces acting on the block are its weight and the reaction force. Even though the surface is rough, there is no frictional force.

If a small horizontal force T is applied to the block, not enough to make it slide, a frictional force F opposes the motion.

In this case, as the block is not moving, F must be equal to T .

If T is increased, F will also increase. However, eventually T will become large enough to move the block. In this case F has reached its maximum value of μR .

Once T exceeds the maximum value of F , there will be a net force in the direction of T , which causes the block to accelerate.
