**Handbook of Lipidology** Tapan Ghose, 2023-07-25      **Managing Discovery in the Life Sciences** Philip A. Rea, Mark V. Pauly, Lawton R. Burns, 2018-02-01 In this book distinguished scholars Philip A Rea Mark V Pauly and Lawton R Burns explore the science and management behind marketable biomedical innovations They look at how the science actually played out through the interplay of personalities the cultures within and between academic and corporate entities and the significance of serendipity not as a mysterious phenomenon but one intrinsic to the successes and failures of the experimental approach With newly aggregated data and case studies they consider the fundamental economic underpinnings of investor driven discovery management not as an obstacle or deficiency as its critics would contend or as something beyond reproach as some of its proponents might claim but as the only means by which scientists and managers can navigate the unknowable to discover new products and decide how to sell them so as to maximize the likelihood of establishing a sustainable pipeline for still more marketable biomedical innovations      **Drug Discovery in Japan** Sadao Nagaoka, 2019-10-24 This book analyzes the drug discovery process in Japan based on detailed case studies of 12 groups of 15 innovative drugs It covers the first statin in the world up to the recent major breakthrough in cancer therapy the recent immune checkpoint inhibitor the scientific discovery for which a 2018 Nobel Prize in Physiology or Medicine was awarded to Prof Tasuku Honjo Kyoto University The book shows the pervasive high uncertainty in drug discovery frequent occurrences of unexpected difficulties discontinuations serendipities and good luck significantly because drug discovery starts when the underlying science is incomplete Thus there exist dynamic interactions between scientific progress and drug discovery High uncertainty also makes the value of an entrepreneurial scientist high Such scientists fill the knowledge gaps by absorbing external scientific progress and by relentless pursuit of possibilities through their own research often including unauthorized research to overcome crises Further high uncertainty and its resolution significantly characterize the evolution of competition in the drug industry The patent system promotes innovation under high uncertainty not only by enhancing appropriability of R D investment but also by facilitating the combination of knowledge and capabilities among different firms through disclosure Understanding such a process significantly benefits the creation of innovation management and policy practices      **The Serengeti Rules** Sean B. Carroll, 2024-08-20 One of today s most accomplished biologists and gifted storytellers reveals the rules that regulate all life How does life work How does nature produce the right numbers of zebras and lions on the African savanna or fish in the ocean How do our bodies produce the right numbers of cells in our organs and bloodstream In *The Serengeti Rules* award winning biologist and author Sean Carroll tells the stories of the pioneering scientists who sought the answers to such simple yet profoundly important questions and shows how their discoveries matter for our health and the health of the planet we depend upon One of the most important revelations about the natural world is that everything is regulated there are rules that regulate the amount of every molecule in our bodies and rules that govern

the numbers of every animal and plant in the wild And the most surprising revelation about the rules that regulate life at such different scales is that they are remarkably similar there is a common underlying logic of life Carroll recounts how our deep knowledge of the rules and logic of the human body has spurred the advent of revolutionary life saving medicines and makes the compelling case that it is now time to use the Serengeti Rules to heal our ailing planet Bold and inspiring The Serengeti Rules illuminates how life works at vastly different scales Read it and you will never look at the world the same way again
