A black line represents the ball's parabolic path. At a point on the path, a green vector arrow points upwards and to the right, representing the velocity. From the tip of this vector, a blue vector arrow points vertically upwards and a red vector arrow points horizontally to the right, representing the vertical and horizontal components of the velocity.</p>

Introduction: Velocity is an example of a **vector** quantity because it describes the speed and direction of an object. The velocity of an object through space can be shown by two components: a horizontal component (v_x) and a vertical component (v_y).

Question: How does the velocity of an object change as it flies through space?

1. **Observe:** Click **Reset**. Turn on **Show velocity vector** and **Show velocity components**. Set v_{initial} to 50 m/s and set θ to 45.0 degrees. Click **Play**. Focus on the blue and red arrows that represent the vertical and horizontal components of the golf ball's velocity.

- A. As the ball flies through the air, what do you notice about the blue (vertical) arrow?
- B. As the ball flies through the air, what do you notice about the red (horizontal) arrow?
- C. Try other velocities and launch angles. Do these results hold up?

It turns upside down.

It points towards the east.

Yes

2. **Calculate:** You can use trigonometry to find the initial horizontal and vertical components of the ball's velocity. Take out your calculator now. Click **Reset**, and turn off **Show velocity vector** and **Show velocity components**. Set v_{initial} to 50.0 m/s and θ to 60.0 degrees.

- A. To calculate v_x , multiply v_{initial} by the cosine of the angle: $v_x = v_{\text{initial}} \cdot \cos(\theta)$:
- B. To calculate v_y , multiply v_{initial} by the sine of the angle: $v_y = v_{\text{initial}} \cdot \sin(\theta)$:
- C. Turn on **Show velocity components**. Were you correct?

25

43.3

Yes

3. **Analyze:** An object flying through the air is said to be in free fall. As you observed, the horizontal component of velocity (v_x) does not change as the object moves, but the vertical component (v_y) decreases over time. (Note: Air resistance is not included in this model.)

- A. What force causes v_y to change as the golf ball travels?
- B. Why doesn't v_x change as the object travels? (Hint: Are there any horizontal forces acting on the ball?)

Gravity

Due to the lack of air resistance
