The secondary system which is similar in construction to the primary system provides mixtures for high speed running and increased load conditions.

Incorporated into the secondary system are a coasting enricher solenoid and a secondary throttle control diaphragm. The coasting enricher is only fitted to manual transmission vehicles. The secondary throttle valve is operated through a vacuum diaphragm assembly and a lockout linkage arrangement which prevents opening until the primary throttle valve is open approximately 50 degrees.

The automatic choke unit is operated by a bimetal spring which is heated by an electric element situated in the choke thermostat cover. The electrical supply to the heater is derived from the alternator via a relay. This means that the heater will only operate to open the choke while the engine is running.

To prevent engine run on when the engine is switched off, an idle stop solenoid is incorporated into the fuel system. When the ignition is turned off the solenoid is de-energised and shuts off the idle fuel supply.

A throttle return dashpot has been fitted to manual transmission vehicles to prevent high emission levels during engine overrun. When the accelerator is released the throttle lever contacts the dashpot diaphragm and is then restrained to close the throttle valve slowly by the action of the dashpot.

TO REMOVE AND INSTALL

(1) Raise the bonnet, instal covers to both front fenders and disconnect the battery earth lead.

(2) Remove the air cleaner retaining bolts and loosen the clamp retaining the air cleaner assembly to the carburettor.

(3) Lift the air cleaner slightly and disconnect the idle compensator hose from the air cleaner. Disconnect the hose from the rocker cover, the emission control valve hose and the air pump hose then lift the air cleaner up and away from the carburettor.

(4) Disconnect the accelerator cable from the throttle lever and mounting bracket on the carburettor.

(5) Mark with quick drying paint and disconnect the fuel lines, the vacuum hose to the distributor and the EGR vacuum hose.

(6) Unplug the electrical wire for the automatic choke at its connector. Unplug the idle stop solenoid wire at its connector. On manual transmission models disconnect the coasting richer solenoid wire at its connector.

Installed view of carburettor showing accelerator cable adjusting point.

(7) Remove the carburettor retaining nuts and washers and lift the carburettor from the inlet manifold studs.

NOTE: It is good practice to plug the inlet manifold while the carburettor is removed.

Installation is a reversal of the removal procedure with attention to the following points:

Ensure that all gasket faces are clean and free from traces of old gaskets. Use new gaskets throughout.

Start the engine and check for fuel or air leaks.

Check that the accelerator cable is correctly adjusted.

Adjust the idle speed when the engine reaches normal operating temperature. Refer to the Engine Tune-up section for correct procedure.

TO DISMANTLE

NOTE: Keep each section of the carburettor separate and, as far as possible, in the order of removal. Note or mark the position of all links and components.
