

## Warm Up

Identify the domain and range of each function.

1.  $f(x) = x^2 + 2$

D:  $\mathbb{R}$ ; R:  $\{y \mid y \geq 2\}$

2.  $f(x) = 3x^3$

D:  $\mathbb{R}$ ; R:  $\mathbb{R}$

Use the description to write the quadratic function  $g$  based on the parent function  $f(x) = x^2$ .

3.  $f$  is translated 3 units up.  $g(x) = x^2 + 3$

4.  $f$  is translated 2 units left.  $g(x) = (x + 2)^2$

Hamburg,2013-03-09 Each undergraduate course of algebra begins with basic notions and results concerning groups rings modules and linear algebra That is it begins with simple notions and simple results Our intention was to provide a collection of exercises which cover only the easy part of ring theory what we have named the Basics of Ring Theory This seems to be the part each student or beginner in ring theory or even algebra should know but surely trying to solve as many of these exercises as possible independently As difficult or impossible as this may seem we have made every effort to avoid modules lattices and field extensions in this collection and to remain in the ring area as much as possible A brief look at the bibliography obviously shows that we don t claim much originality one could name this the folklore of ring theory for the statements of the exercises we have chosen but this was a difficult task indeed the 28 titles contain approximatively 15 000

problems and our collection contains only 346 The real value of our book is the part which contains all the solutions of these exercises We have tried to draw up these solutions as detailed as possible so that each beginner can progress without skilled help The book is divided in two parts each consisting of seventeen chapters the first part containing the exercises and the second part the solutions     *Student Tech GD Alg 1 2001* Holt Rinehart & Winston,Holt, Rinehart and Winston Staff,2001
