Vocabulary: [Quizlet](#)

- ☐ Cell Size: smaller cells are more efficient than large ones.
- ☐ Surface Area: measurement of the outer surface of an object
- ☐ Volume: amount of space an object takes up
- ☐ Surface area to volume ratio: ratio of cell's outside area to internal volume.
- ☐ Cell Division: process by which a cell divides into 2 new daughter cells
- ☐ Binary Fission: a form of asexual reproduction in which one cell divides into 2. (prokaryotic cells)
- ☐ Cell Cycle: sequence of events in which a cell grows, prepares for division, and divides to form 2 daughter cells.
- ☐ Daughter Cells: cells that are produced as a result of mitosis, are identical, and original to parent cell.
- ☐ Parent Cell: original cell before division.
- ☐ Mitosis: when the cell nucleus divides in somatic cells.
- ☐ Somatic Cells: body cells
- ☐ Meiosis: cell division that results in cells with half of the chromosomes; in reproductive cells.
- ☐ Interphase: Cell grows, performs its normal functions, and prepares for division; consists of G1, S, and G2 phases.
- ☐ Gap 1 Phase: stage of interphase in which cell grows and performs its normal functions

**New Challenges and Perspectives in Conservation Breeding Programs** Eliana Pintus, José Luis Ros-Santaella, William Holt, Pierre Comizzoli, 2025-05-21 Conservation Breeding Programs CBPs remain essential tools to preserve animal biodiversity and save threatened species from extinction Despite the advances made during the last decades CBPs have been carried out only on a small number of species mostly mammals and birds There is therefore an urgent need to develop and complement in situ and ex situ strategies to also preserve other vertebrates like fish amphibians and reptiles in which the biodiversity loss because of climate change or other anthropogenic activities is even more dramatic One of the main factors that limits CBPs success is the lack of knowledge of the animal reproductive biology and behavior which is precisely known for instance in less than 4% of mammals the majority of which are terrestrial species Such knowledge is beneficial not only to enhance but also to control animal fertility that is especially warranted for the management of overabundant or invasive species which represent a further major threat for biodiversity The goal of this Research Topic is to bring together studies that deal with different aspects of animal reproduction both in captive and wild populations This includes both ex situ and in situ approaches such as the management of animal reproduction in captive populations and their reintroduction release into the wild Other approaches such as assisted reproductive technologies and biobanking greatly contribute to the success of conservation breeding This Research Topic also welcomes studies exploring the effects of biotic e g inbreeding diseases stress and abiotic e g anthropogenic activities housing and veterinary care factors on reproductive biology of all vertebrates classes with a special interest to fish amphibians and reptiles As a comprehensive knowledge of animal reproduction and behavior plays a key role for the development and success of breeding programs descriptive studies on reproductive anatomy and physiology of wild or captive species either endangered or overabundant are welcomed The Research Topic also accepts manuscripts that deal with ethical aspects of animal welfare in CBPs and population

management of invasive or overabundant species
