**Mad Science** Joseph Mangano, 2012-10-01 Will Americans once again play nuclear roulette Just one year after the Fukushima meltdown all 54 reactors in Japan have been closed and may never be restarted Germany recently closed several reactors and will shutter them all within a decade Italy revoked its pledge to build new reactors keeping that nation nuclear free All these decisions are based on the understanding that reactors are extremely dangerous and expensive In the U S the remnants of the once overwhelmingly powerful nuclear lobby are making their last stand for clean nuclear energy The sixty year old vision of power too cheap to meter words originally uttered by a banker promoting the industry is back While other countries end their reliance on nuclear energy Americans contemplate its revival even as existing reactors which produce a fifth of U S electricity pass retirement age and are corroding In Mad Science Joseph Mangano strips away the near smothering layers of distortions and outright lies that permeate the massive propaganda campaigns on behalf of nuclear energy He explores the history of the industry with its origins in the Manhattan Project through its heightening promotion during the Cold War and its entwinement with nuclear weapons Mad Science includes an account of nuclear accidents and meltdowns and their consequences from Chernobyl to Santa Susana and beyond as well as a point by point refutation of pro nuke arguments Atomic energy is unsafe it deals with staggeringly poisonous substances at every stage of its creation un economical in the extreme and impractical      **Radicalism, Revolution, and**

**Reform in Modern China** Catherine Lynch, Robert B. Marks, Paul G. Pickowicz, 2011-03-31 This volume illuminates the relationship of China's radical past to its reformist present as China makes a way forward through very differently conceived and contested visions of the future In the context of early twenty first century problems and the failures of global capitalism is China's history of revolutionary socialism an aberration that is soon to be forgotten or can it serve as a resource for creating a more fully human and radically democratic China with implications for all of us Ranging from the early years of China's revolutionary twentieth century to the present the essays collected here look at the past and present of China with a view toward better understanding the ideas ideals and people who have dared to imagine radical transformation of their worlds and to assess the conceptual political and social limitations of these visions and their implementations The volume's chapters focus on these issues from a range of vantage points representing a spectrum of current scholarship The first half of

the book brings new insights to understanding how early twentieth century intellectuals interpreted ideas that allowed them to break with China's past and to envision new paths to a modern future. It treats of Chen Duxiu a founder of the Communist party, Mao Zedong and Mao in relation to the non Communist Liang Shuming and with the Dalai Lama. With continuing threads of nation and nationalities of peasants, utopias and dystopias linking the chapters, the book's second half looks broadly at the consequences of the implementations of radical ideas at the same time critiquing our accepted frameworks of analysis. Moving up to the present, the book investigates the effects of the reforms since the 1980s on long term environmental degradation and on the emergence of a capitalist rural economy. It gives an unsparing view into contemporary rural China through independent films. The book concludes with an analysis of the unshakable persistence of the shibboleth, the rise of China in popul.

This book includes high quality papers presented at the International Conference on Data Science and Management ICDSM 2019 organised by the Gandhi Institute for Education and Technology Bhubaneswar from 22 to 23 February 2019. It features research in which data science is used to facilitate the decision making process in various application areas and also covers a wide range of learning methods and their applications in a number of learning problems. The empirical studies, theoretical analyses and comparisons to psychological phenomena described contribute to the development of products to meet market demands.

Energy and the New Reality 2 L. D. Danny Harvey, 2010-08-12

Transforming our energy supplies to be more sustainable is seen by many to be the biggest challenge of our times. In this comprehensive textbook L D Danny Harvey sets out in unprecedented detail the path we must take to minimize the effects that the way we harness energy will have on future climate change. The book opens by highlighting the importance of moving to low carbon technologies for generation, then moves on to explain the functioning, potential and social environmental issues around solar energy, wind energy, biomass energy, geothermal energy, hydroelectric power, ocean energy, nuclear energy. It also covers the options for carbon capture and storage and the contexts in which low carbon energy can best be utilized, potential for community integrated systems and the hydrogen economy. The book closes with scenarios that combine the findings from its companion volume concerning the potential for limiting future energy demand with the findings from this volume concerning the cost and potential of C free energy systems to generate scenarios that succeed in limiting future atmospheric CO<sub>2</sub> concentration to no more than 450 ppmv. Detailed yet accessible, meticulously researched and reviewed, this work constitutes an indispensable textbook and reference for students and practitioners in sustainable energy and engineering.
