

THE "JUNIOR"

PROOF OF ITS BENEFITS

Rotary Tillage was first successfully introduced to the agricultural world in 1923, when Mr. A. C. Howard began preparations to manufacture the Howard Patent Rotary Hoe.

To-day, after 25 years, when the Factory covers 4 acres and provides the livelihood of over 800 employees, it is evident that the farmer wanted Rotary Tillage, performed by Howard Rotary Hoes, and how much they wanted it is shown in the wonderful growth of Howard Auto-Cultivators Limited. Rotary Tillage alone has been responsible for the transformation of a small workshop employing a couple of men and boys to the big, busy factory of 1948. Tens of thousands of Rotary Hoes are used throughout Australasia and other countries of the world.

With the Rotary Hoe method of cultivation, the Howard Patent Hoe blades are attached to flanges on a rotor—as this revolves a semi-circular piece of earth is cut clean out by each blade and the blades enter the ground several inches ahead of their previous point of contact, the distance depending on the rate the tractor is travelling. The faster the speed the longer the cut. This means that the sods are lifted from underneath; whilst the sods are in the air they are caught by the following blades and broken up.

It is this feature which enables Howard Rotary Hoes to cut up and mix into the soil tall, dense bracken, thistles, rushes and the like, and green manure crops of lupins, tick beans, peas, etc., which could not be handled nearly so efficiently by any other implement. Couch grass is also easily controlled with the Rotary Hoe.
