Climate Change Law in China in Global Context Xiangbai He, Hao Zhang, Alexander Zahar, 2020-05-31 In Climate Change Law in China in Global Context seven climate change law scholars explain how the country's legal system is gradually being mobilized to support the reduction of greenhouse gas emissions in China and achieve adaptation to climate change. There has been little English scholarship on the legal regime for climate change in China. This volume addresses this gap in the literature and focuses on recent attempts by the country to build defences against the impacts of climate change and to meet the country's international obligations on mitigation. The authors are not only interested in China's laws on paper; rather, the book explains how these laws are implemented and integrated in practice and sheds light on China's current laws in preparation for the changing standing of law relative to policy and the further reforms that will be necessary in response to the 2015 Paris Agreement on Climate Change. This comprehensive and critical account of the Chinese legal system's response to the pressures of climate change will be an important resource for scholars of international law, environmental law, and Chinese law.

How to Pool Risks Across Generations Michael Otsuka, 2023-05-28 How to Pool Risks across Generations makes the case for the collective provision of pensions on fair terms of social cooperation. Through the insurance of a mutual association which extends across society and over multiple generations, we share one another's fates by pooling risks across both space and time. Resources are transferred not simply between different people but also within the possible future lives of each person from one's more fortunate to one's less fortunate future selves. The book opens with an investigation of the longevity and investment risk that even a single individual

on a desert island would face in providing for her old age From this atomistic starting point it builds up within and across the chapters to increasingly collective forms of pension provision By joining together it is possible to tame the risks we would face as individuals each with our own private pension pot A collective pension can be justified as a social union of social unions an enduring corporate body which is formed by agreements to pool risks in a manner that involves reciprocity between the various individuals that constitute the collective Even though all individuals age and die a collective pension scheme remains evergreen as the average age of members remains relatively unchanged through the influx of new members to replace those who retire It is therefore possible to smooth risks indefinitely across as well as within generations to the mutual advantage of each

Greening EU Competition Law and Policy Suzanne Kingston, 2011-10-27 One of the fundamental challenges currently facing the EU is that of reconciling its economic and environmental policies Nevertheless the role of environmental protection in EU competition law and policy has often been overlooked Recent years have witnessed a shift in environmental regulation from reliance on command and control to an increased use of market based environmental policy instruments such as environmental taxes green subsidies emissions trading and the encouragement of voluntary corporate green initiatives By bringing the market into environmental policy such instruments raise a host of issues that competition law must address This interdisciplinary treatment of the interaction between these key EU policy areas challenges the view that EU competition policy is a special case insulated from environmental concerns by the overriding efficiency imperative and puts forward practical proposals for achieving genuine integration

Regulatory Transformations Bettina Lange, Fiona Haines, Dania Thomas, 2015-09-10 The issue of whether transnational risk can be regulated through a social sphere goes to the heart of what John Ruggie has described as embedded liberalism how capitalist countries have reconciled markets with the social community that markets require to survive and thrive This collection located in the wider debates about global capitalism and its regulation tackles the challenge of finding a way forward for regulation It rejects the old divisions of state and market citizens and consumers social movements and transnational corporations as well as economic and social regulation Instead this rich multidisciplinary collection engages with a critical theme the idea of harnessing the regulatory capacity of a social sphere by recognising the embeddedness of economic transactions within a social and political landscape This collection therefore explores how social norms practices actors and institutions frame economic transactions and thereby regulate risks generated by and for business state and citizens A key strength of this book is its integration of three distinct areas of scholarship Karl Polanyi's economic sociology regulation studies and socio legal studies of transnational hazards The collection is distinct in that it links the study of specific transnational risk regulatory regimes back to a social theoretical discussion about economy society interactions informed by Polanyi's work Each of the chapters addresses the way in which economics as well as economic and social regulation can never be understood separately from the social particularly in the transnational context Endorsement This thought provoking collection asks the most critical question of our time how to civilise markets through social accountability and political action The climate and financial crises we face show how crucial this challenge is Lange Haines and Thomas have put together a series of fruitful case studies of the possibilities for embedding economic relationships in social relationships by a series of top class researchers within their own illuminating and sensitive framing of the issue Professor
