*Tackling Marine Debris in the 21st Century* Committee on the Effectiveness of International and National Measures to Prevent and Reduce Marine Debris and Its Impacts, Ocean Studies Board, Division on Earth and Life Studies, National Research Council, 2008-12-31 Marine debris from ships and other ocean based sources including trash and lost fishing gear contributes to the spoiling of beaches fouling of surface waters and the seafloor and harm to marine animals among other effects Unfortunately international conventions and domestic laws intended to control marine debris have not been successful in part because the laws as written provide

little incentive to change behavior This book identifies ways to reduce waste improve waste disposal at ports and strengthen the regulatory framework toward a goal of zero waste discharge into the marine environment Progress will depend on a commitment to sustained funding and appropriate institutional support The Interagency Marine Debris Coordinating Committee should through planning and prioritization target research to understand the sources fates and impacts of marine debris It should support the establishment of scalable and statistically rigorous protocols that allow monitoring at a variety of temporal and spatial scales These protocols should contain evaluative metrics that allow assessment of progress in marine debris mitigation The United States through leadership in the international arena should provide technical assistance and support for the establishment of additional monitoring and research programs worldwide

*Jurisdiction of the Coastal State over Foreign Merchant Ships in Internal Waters and the Territorial Sea* Haijiang Yang, 2006-07-30 The general international law regarding foreign merchant ships in internal waters has never been codified The question of the breadth of the territorial sea was finally solved during the Third United Nations Conference on the Law of the Sea But conflicts between coastal States and foreign merchant ships in internal waters and the territorial sea may arise This comprehensive study analyses these issues and strives for reasonable and generally acceptable solutions

*International Law Obligations on Climate Change Mitigation* Benoit Mayer, 2022-07-11 Recent years have witnessed exciting developments in international negotiations litigation and scholarship about climate change but doctrinal research in the field remains in its infancy In particular little is known about how fast states are required to limit and reduce their greenhouse gas emissions The first part of the book identifies the relevant obligations through an analysis of treaties custom and other sources of international law Beyond express quantified commitments contained for instance in nationally determined contributions the book sheds light on the existence of general obligations of due diligence While these general obligations are difficult to interpret they are often more demanding The second part explores how these general obligations can be applied objectively for instance by a court in concrete cases Instead of an improbable judicial assessment of a state s requisite level of mitigation action the book shows the possibility of assessing a state s conduct based on the measures that general mitigation obligations entail These measures relate to corollary duties of cooperation vigilance and consistency This book presents a first comprehensive doctrinal study of states obligations on climate change mitigation It shows that such obligations arise not only from climate treaties but also from customary international law unilateral declarations and possibly human rights treaties It also explores the interactions between these multiple obligations

**Carbon-Free Shipping and Shipping Carbon** Stephen Girvin, Vibe Ulfbeck, 2024-08-22 This book explores the private law implementation of the new international and EU regulatory framework targeting decarbonisation in the shipping industry Compared with other sectors the shipping industry has traditionally been labelled a slow mover concerning the sustainability agenda However new regulatory measures on carbon reduction both internationally and in the EU require fundamentally new developments in the industry This book focuses on the goal of carbon reduction from a private law perspective and considers how the new regulatory framework can be implemented in the shipping industry This book

studies existing contractual provisions in charterparties and bills of lading alongside new contractual model clauses designed to facilitate carbon reduction. It considers how the new clauses should be interpreted whether they will transform traditional shipping contracts into more collaborative contracts and how they will interact with other clauses in the contract and with other contracts in the supply chain. The contractual analysis is considered in context reflecting on enforcement issues such as Port State Control (PSC), the Poseidon Principles and climate change litigation. The book also analyses the related topic of shipping contracts for carbon storage as a necessary means of meeting carbon reduction targets. The book is intended to pave the way for understanding how core shipping contracts can work in this new context and the extent to which the new types of clauses will profoundly transform contracts. It presents contributions by experienced and younger academics and practitioners from Asian, European and Scandinavian legal systems.

Competing Norms in the Law of Marine Environmental Protection Henrik Ringbom, 1997-10-01. The number of global instruments affecting the law of marine environmental protection, both soft and hard law, grows constantly. Regional organizations have become increasingly concerned with matters affecting traditional freedoms of the seas. As a result, the law in this area has rapidly expanded, often creating competing or conflicting rules. Competing Norms in the Law of Marine Environmental Protection contains edited versions of the papers presented at a conference in the Åland Islands, Finland, in August 1996, convened by the Department of Law of Åbo Akademi University, Finland. It provides a detailed examination of current legal issues relating to the variety of rules and rule makers in the field of marine environmental protection. It then goes further, relating the recent developments to international law in a wider context. The legal regime regulating ship safety and pollution prevention provides an excellent illustration of contemporary trends of international law in general and of the law of the sea and international environmental law in particular.
