Timeline

Organize media in the Library browser and the browser

Your imported media is available in search in your library. You want to use a browser that contains clips and projects.

When you select an event in a library, its clips and projects appear in the browser on the right.

Play back clips and projects in the viewer

The viewer is where you play back your video, including clips and projects with full resolution and sound. You can play back projects, projects, or individual clips in full-screen view or on a second display. With the event viewer, a separate video display that can be shown next to the main viewer, you can display two clips at the same time: one from the browser and one from the timeline. For information about ways to play media, see [Play back media](#).

Organize the timeline using audio lanes

With a few clicks, you can arrange audio clips into the audio lanes, based on their role assignments. Audio has an essential, visually distinct layout in the timeline. This organizes audio clips clearly and provides enhanced editing tools, making audio editing more efficient.

Organizing the timeline in this way does not affect the way your project is how it plays back in the viewer and simplifies the timeline experience for your editing convenience.

Notes: When you display audio roles in separate lanes in the timeline, any clips that contain both audio and video are expanded to show audio and video separately.
