

Section 1: From Genes to Proteins

- _____ 1. ribonucleic acid (RNA)
- _____ 2. uracil
- _____ 3. transcription
- _____ 4. translation
- _____ 5. gene expression

a. the entire process by which proteins are made
b. a molecule made of linked nucleotides

- _____ 6. Transcription begins when [RNA / RNA polymerase] binds to the gene's promoter.
- _____ 7. RNA polymerase adds complementary [DNA / RNA] nucleotides as it "reads" the gene.
- _____ 8. In eukaryotes, transcription takes place in the [nucleus / cytoplasm].
- _____ 9. What are two differences between transcription and DNA replication?

- c.** the process of reading instructions on an RNA molecule to put together the amino acids that make up a protein
- d.** the process of transferring a gene's instructions for making a protein to an RNA molecule
- e.** a nitrogen base used in RNA instead of the base thymine found in DNA

- _____ 10. What determines where on the DNA molecule transcription begins and where it ends?

_____ 11. RNA, messenger RNA _____

_____ 12. codons, genetic code _____

Study the following six steps in the synthesis of proteins. Determine the order. Write the number

- _____ 13. The codon in the vacant A site receives the tRNA molecule with the complementary anticodon. The tRNA carries the amino acid specified by the codon.
- _____ 14. Steps 2–5 are repeated until a stop codon is reached. The newly made protein is released into the cell.
- _____ 15. The tRNA at the P site detaches, leaves behind its amino acid, and moves away from the ribosome.
- _____ 16. Enzymes help form a peptide bond between the amino acids of adjacent tRNA molecules.
- _____ 17. The tRNA (with its protein chain) in the A site moves over to fill the empty P site. A new codon is present in the A site, ready to receive the next tRNA and its amino acid.
- _____ 18. An mRNA, two ribosomal subunits, and a tRNA carrying a modified form of the amino acid methionine bind together. The tRNA bonds to the "start" codon AUG.

Section 2: Gene Regulation and Structure

- _____ 1. To break down lactose, *Escherichia coli* need three different _____, each of which is coded for by a different gene.
- _____ 2. The three genes are located next to each other, and all are controlled by the same _____ site.
- _____ 3. The piece of DNA that overlaps the promoter site and serves as the on-off switch is called a(n) _____.
- _____ 4. The group of genes that codes for enzymes involved in the same function, their promoter site, and the operator all function together as a(n) _____.
- _____ 5. The operon that controls the metabolism of lactose is called the _____.
- _____ 6. A(n) _____ is a protein that binds to an operator and physically blocks RNA polymerase from binding to a promoter site.
- _____ 7. What are enhancers? _____
- _____ 8. Why is there more opportunity for gene regulation in eukaryotic cells than in prokaryotic cells? _____
- _____ 9. Why have no operons been found in eukaryotic cells? _____
- _____ 10. When can gene regulation occur in eukaryotic cells? _____
- _____ 11. What are introns and exons? _____
- _____ 12. What happens to mRNA that includes introns? _____
- _____ 13. What might be the evolutionary advantage of genes being interrupted by introns? _____
- _____ 14. Mutations can only be passed on to offspring if they occur in [gametes / body cells].
- _____ 15. Mutations that change one or just a few nucleotides in a gene on a chromosome are called [random / point] mutations.
- _____ 16. If a mutation causes a gene containing the nucleotide sequence ACA to become ACT, the mutation is called a [substitution / deletion] mutation.
- _____ 17. If a mutation causes a sequence of nucleotides to change from ACGAGA to ACGGA, the mutation is called a(n) [insertion / deletion] mutation.
- _____ 18. If a mutation causes a sequence of nucleotides to change from ACGAGA to ACGAGGA, the mutation is called a(n) [insertion / deletion] mutation.

Gene Future Thomas F. Lee, 2013-11-09 As Lee so wisely and eloquently cautions there may be perils along this pathway as well as miraculous discoveries Do dangers lurk in this new technological approach to nature May we unwittingly be doing irreparable harm to individuals not to mention the biosphere This perceptive author even handedly assesses the controversies surrounding the perils that may await us as molecular science moves out of the laboratory and into our homes and environment This fascinating and comprehensive volume shows that the time has come to confront our gene future because our gene future is now Jacket *Crf#14 Genes/Action Holt Biology 2008* Holt Rinehart & Winston, 2008-01-01

The Genetic Revolution Bernard D. Davis, 1991 Remarkable advances in molecular genetics have brought benefits ranging from more flavorful tomatoes to inexpensive human insulin produced in bacteria But not everyone welcomes the inevitable genetic revolution Perhaps because experts and the general public belatedly recognized that the benefits of other technologies have come at great cost pollution of the environment exhaustion of natural resources even damage to the atmosphere many assume that similarly unintended and unforeseen harmful consequences are inevitable for biotechnology What monsters and disasters they wonder will accompany the miracles of this latest advance In *The Genetic Revolution* Bernard D Davis and other experts address such fears with clear explanations of molecular genetics its practical applications in biotechnology its legal implications and its surprising historical context In fact biotechnology is as old as civilization itself and was originally called domestication the adaptation of initially wild organisms by empirical genetic selection to meet

human needs And the scientific record shows that unlike more recent technologies based on the physical sciences the great benefits of domestication have been remarkably free of harmful side effects Defenders argue that the new techniques of genetic engineering will simply increase the speed precision and range of domestication However the purpose will remain the same to strengthen those traits in animals plants or microbes that make the organism more useful for humans To ensure that all sides of the debate are heard Davis has chosen outstanding contributors with a wide range of viewpoints from apprehensive to enthusiastic and a variety of backgrounds including political science law and government regulation as well as biology and medicine With the latest information on the likely impact of genetic engineering in agriculture animal husbandry ecology and medical research and practice The Genetic Revolution introduces scientific facts and informed opinions to an emotional and often confusing public discussion

Genetic Engineering Enzo Russo, Vincenzo E. A. Beyond Biotechnology Craig Holdrege, 2010-09-12 In 2001 the Human Genome Project announced that it had successfully mapped the entire genetic content of human DNA Scientists politicians theologians and pundits speculated about what would follow conjuring everything from nightmare scenarios of state controlled eugenics to the hope of engineering disease resistant newborns As with debates surrounding stem cell research the seemingly endless possibilities of genetic engineering will continue to influence public opinion and policy into the foreseeable future Beyond Biotechnology The Barren Promise of Genetic Engineering distinguishes between the hype and reality of this technology and explains the nuanced and delicate relationship between science and nature Authors Craig Holdrege and Steve Talbott evaluate the current state of genetic science and examine its potential applications particularly in agriculture and medicine as well as the possible dangers The authors show how the popular view of genetics does not include an understanding of the ways in which genes actually work together in organisms Simplistic and reductionist views of genes lead to unrealistic expectations and ultimately disappointment in the results that genetic engineering actually delivers The authors explore new developments in genetics from the discovery of non Darwinian adaptive mutations in bacteria to evidence that suggests that organisms are far more than mere collections of genetically driven mechanisms While examining these issues the authors also answer vital questions that get to the essence of genetic interaction with human biology Does DNA manage an organism any more than the organism manages its DNA Should genetically engineered products be labeled as such Do the methods of the genetic engineer resemble the centuries old practices of animal husbandry Written for lay readers Beyond Biotechnology is an accessible introduction to the complicated issues of genetic engineering and its potential applications In the unexplored space between nature and laboratory a new science is waiting to emerge Technology based social and environmental solutions will remain tenuous and at risk of reversal as long as our culture is alienated from the plants and

animals on which all life depends *Genes & DNA* Richard Walker, PH.D.,2007-05-01 KFK Genes DNA explores the intricate mysteries of this exciting science From the basics of genes and their function as the code for life through variations in families and inheritance to the wide ranging applications of DNA technology find out how genes and DNA work Investigate forensics gene therapy cloning and genetic engineering and discover fascinating insights into the biology of the world around us
