- 12.** Urea, $(\text{NH}_2)_2\text{CO}$, is an important fertilizer that is manufactured by the following reaction.

What volume of NH_3 at STP will be needed to produce 8.50×10^4 kg of urea if there is an 89.5% yield in the process?

- 13.** An obsolete method of generating oxygen in the laboratory involves the decomposition of barium peroxide by the following equation.

What mass of BaO_2 reacted if 265 mL of O_2 is collected by water displacement at 0.975 atm and $10.^\circ\text{C}$?

- 14.** It is possible to generate chlorine gas by dripping concentrated HCl solution onto solid potassium permanganate according to the following equation.

If excess HCl is dripped onto 15.0 g of KMnO_4 , what volume of Cl_2 will be produced? The Cl_2 is measured at 15°C and 0.959 atm.

- 15.** Ammonia can be oxidized in the presence of a platinum catalyst according to the following equation.

The NO that is produced reacts almost immediately with additional oxygen according to the following equation.

If 35.0 kL of oxygen at STP react in the first reaction, what volume of NH_3 at STP reacts with it? What volume of NO_2 at STP will be formed in the second reaction, assuming there is excess oxygen that was not used up in the first reaction?

- 16.** Oxygen can be generated in the laboratory by heating potassium chlorate. The reaction is represented by the following equation.

What mass of KClO_3 must be used in order to generate 5.00 L of O_2 , measured at STP?

- 17.** One of the reactions in the Solvay process is used to make sodium hydrogen carbonate. It occurs when carbon dioxide and ammonia are passed through concentrated salt brine. The following equation represents the reaction.

- a.** What volume of NH_3 at 25°C and 1.00 atm pressure will be required if 38 000 L of CO_2 , measured under the same conditions, react to form NaHCO_3 ?
- b.** What mass of NaHCO_3 can be formed when the gases in (a) react with NaCl ?

Gómez-Pérez, 2010-07-08 The development of knowledge based systems is usually approached through the combined skills of knowledge engineers KEs and subject matter experts SMEs One of the most critical steps in this activity aims at transferring knowledge from SMEs to formal machine readable representations which allow systems to reason with

such knowledge However this is a costly and error prone task Alleviating the knowledge acquisition bottleneck requires enabling SMEs with the means to produce the desired knowledge representations without the help of KEs This is especially difficult in the case of complex knowledge types like processes The analysis of different application domains uncovers that process knowledge is one of the most frequent knowledge types whose complexity requires specific means to enable SMEs to represent processes in a computational form Additionally such complexity and the increasingly large amount of data that process executions generate in knowledge intensive domains like Biology or Astronomy requires analytical means with high abstraction capabilities to support SMEs in the analysis of such processes This book presents methods and tools that enable SMEs to acquire process knowledge from the domains formally represent such knowledge reason about it and understand process executions by analyzing their provenance We describe the utilization of Problem Solving Methods as the main knowledge artifacts for process acquisition and analysis in two innovative ways First as formalizations of the reasoning strategies needed for processes and second as high level domain independent and reusable abstractions of process knowledge to provide SMEs with interpretations of process executions
