Irwin, Scott Rabinow, Strategic Highway Research Program, 1994 **High Temperature Calibration Furnace System User's Guide** National Aeronautics and Space Administration (NASA), 2018-07-05

The High Temperature Calibration Furnace System HTCFS was developed by Summitec Corporation. It is a high precision instrument providing a constant temperature which can be used to calibrate high temperature thermocouples. Incorporating the many recent technological advances from the fields of optical fiber thermometry, material science, computer systems interfacing, and process control, the engineers at Summitec Corporation have been able to create a system that can reach a steady operating temperature of 1700 C. The precision for the system requires the measurement of temperature to be within 1 C in two hours and within 2 C in 24 hours. As documented, the experimental result shows that this system has been able to stay within 5 C in 5 hours. No other systems commercially available have been able to achieve such high temperature precision. This manual provides an overview of the system design, instructions for instrument setup and operation procedures. Also included are a vendor list and the source codes for the custom designed software. Unspecified Center NAS8 39351
