In addition to theoretical background, this book provides a detailed protocol for CO-OP Cognitive Orientation to Daily Occupational Performance, an intervention that has been shown to facilitate problem solving and enhance motor skill acquisition for children with DCD. *Children with Developmental Coordination Disorder* offers a comprehensive discussion of the disorder, including identification and assessment of children with DCD, analysis of the Bruininks-Oseretsky Test of Motor Proficiency and the Movement Assessment Battery for Children, the theoretical and empirical basis for current treatment approaches, new motor learning theories and their implications for treatment, the systematic development and evaluation of the CO-OP approach from early case studies through videotape analysis and retrospective chart review. Based on six years of systematic cooperative research, *Children with Developmental Coordination Disorder* demonstrates the success of a unique cognitive approach to intervention with these frustrated children.
