**Endodontic Irrigation** Bettina Basrani, 2015-07-17 This book reviews the available information on bacterial disinfection in endodontics with emphasis on the chemical treatment of root canals based on current understanding of the process of irrigation It describes recent advances in knowledge of the chemistry associated with irrigants and delivery systems which is of vital importance given that chemical intervention is now considered one of the most important measures in eliminating planktonic microbes and biofilms from the infected tooth Recommendations are made regarding concentrations exposure times and optimal sequences Possible complications related to the use of the different solutions are highlighted with guidance on

response In addition clinical protocols are suggested on the basis of both clinical experience and the results of past and ongoing research Throughout a practical clinically oriented approach is adopted that will assist the practitioner in ensuring successful endodontic treatment

**Agricultural Adaptation to Climate Change** Christopher R. Bryant, Mamadou A. Sarr, Kénel Délusca, 2016-08-26 This book deals with one of the major challenges facing human society and its governments climate change and variability The principal objective of the book is to explore how agricultural production through the actions primarily of farmers including peasant farmers adapt to these changing circumstances what the limitations of adaptation are how the process of adaptation varies between different territories e g developed countries versus developing countries and what are or can be the most effective roles for actors other than the farmers including different levels of government and non governmental organizations NGOs such as professional associations of farmers and community organizations The principal argument is threefold 1 while there are significant differences between territories and countries in terms of the capacity of farmers and the other actors to engage in capacity building to be able to adapt effectively to climate change and variability 2 the critical roles are those played out by the farmers themselves but that 3 other actors can play an important role in accompanying farmers in their adaptation process providing relevant and strategic information counseling them and facilitating networking and meetings when appropriate This effectively means that without engaging in the local adaptation processes governments can really only play effective roles by working with other actors at the local and regional levels When it occurs it can be very effective but when it does not farmers are left to their own devices and even then many are able to use their own creativity and local knowledge to survive and continue to develop Essentially therefore the secondary argument that is followed throughout the book is that adaptation is essentially a social process that requires an understanding of social processes and dynamics in each farming community and territory It involves an understanding for instance of information diffusion processes in the different farming communities and territories which provides a set of tools to promote and facilitate the adoption process in the context of adaptation to climate change and variability
