Measuring Up Daniel Koretz, 2009-09-15 *Measuring Up* demystifies educational testing from MCAS to SAT to WAIS Bringing statistical terms down to earth Koretz takes readers through the most fundamental issues that arise in educational testing and shows how they apply to some of the most controversial issues in education today from high stakes testing to special education

Measuring Up Christopher Thomas, Milton Ospina, 2004 Publisher Description **Measuring Up** Arie L. Nettles, Michael T. Nettles, 2012-12-06 *Measuring Up* revisits vital issues of equity and assessment through the research efforts and insights of many of the nation's most prominent educators and assessment experts As its most urgent purpose the publication aims to sensitize readers to the unfairness and inappropriate uses of testing instruments which under optimal circumstances have the potential to benefit all students With America fervently espousing both national and state testing the differential performance by race and social class raises the specter of tests as barriers to life milestones such as promotion graduation and college admissions In response to such punitive testing the papers included here explore a host of models and practices that are currently being piloted both in America and abroad as educators grapple with the effects the assessment is having on minority and disadvantaged students and school systems In the process outcomes of innovative portfolio and authentic assessments are weighed against important standards and principles of validity and consequences As the various authors probe the gap between African American and White test scores they raise important questions of resources family background and educational opportunity Beyond their value of their recommendations to educators their papers help to identify causes of pupil deficiencies in ways that can be addressed by policymakers To reinforce the emphasis on equity several authors present a definitive defense of affirmative action as a critical counter measure to the lack of fairness in school quality family and social supports and educational resources

Measuring Up in Education Steven Stolz, R. Scott Webster, 2020-05-21 Cultures of measurement are often considered to dominate educational practices to the degree

that as Biesta 2010 has identified in *Good Education in an Age of Measurement* we no longer measure what we value but rather we have become conditioned to value what is measured A clear example of this occurs when institutions and staff teach to the test by emphasising narrow conceptions of learning and of knowledge simply because the consequences of high stakes assessments have important implications regarding funding resources and even tenure This collection explores via various philosophical means how valuable educational practices can occur within and beyond cultures of measurement What seems to be required is for practitioners in education to regain their relationship to the overall purposes of education such as the furthering of justice and democracy for both individual students and societies as a whole Such a reconnection has the potential to re humanise curricular experiences for students which may have become dehumanised through particular cultures of measurement It is argued that certain legitimate measures can advance justice and democracy and so careful attention must be assigned to their validity and value This book was originally published as a special issue of *Educational Philosophy and Theory* *Measuring Up in Higher Education* Anthony Welch, Jun Li, 2021-05-03 This book examines the quality assessment movement in academic scholarship as globalization prompts a search for global measures of university services and output It gauges productivity in terms of universal publication metrics and considers ranking and research productivity from a comparative perspective The book considers the use of the impact factor as a gauge of publication value noting that this is less important in countries lacking central government appropriations to universities and to research It argues that pressure to publish in certain journals and to research topics of interest to English language readers has been felt differentially in English language systems compared to others but also that performance pressures fall more on younger more junior contract staff than on senior and tenured professors It problematizes international comparisons of quality and analyses the benefits of a zone of ideas and metrics in a common language promoting international mobility efficiency collaboration but also the costs which are rarely borne equally across countries languages and cultures The book provides a strong evidence based contribution to major debates in contemporary higher education reforms and the measurement of academic output *Measuring Up* Robert Rothman, 1995-03-29 Rothman offers a highly accessible examination of the shift in thinking about testing Illustrative case studies of assessment programs provide a window into the classrooms showing how change has come about and what the new methods actually look like in practice *Resources in Education* , 2000-04
