Ward, 2017-06-26 This book is open access under a CC BY NC 2.5 license The Gulf of Mexico is an open and dynamic marine ecosystem rich in natural resources but heavily impacted by human activities including agricultural industrial commercial and coastal development The Gulf of Mexico has been continuously exposed to petroleum hydrocarbons for millions of years from natural oil and gas seeps on the sea floor and more recently from oil drilling and production activities located in the water near and far from shore Major accidental oil spills in the Gulf are infrequent two of the most significant include the Ixtoc I blowout in the Bay of Campeche in 1979 and the Deepwater Horizon Oil Spill in 2010 Unfortunately baseline assessments of the status of habitats and biota in the Gulf of Mexico before these spills either were not available or the data had not been systematically compiled in a way that would help scientists assess the potential short term and long term effects of such events This 2 volume series compiles and summarizes thousands of data sets showing the status of habitats and biota in the Gulf of Mexico before the Deepwater Horizon Oil Spill Volume 1 covers water and sediment quality and contaminants in the Gulf natural oil and gas seeps in the Gulf of Mexico coastal habitats including flora and fauna and coastal

conserving natural areas reducing hard surface cover e g roads and parking lots and retrofitting urban areas with features that hold and treat stormwater are recommended **Interior, Environment, and Related Agencies Appropriations for 2009** United States.
