Renewable Fuel Standard National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Division on Earth and Life Studies, Board on Agriculture

and Natural Resources, Committee on Economic and Environmental Impacts of Increasing Biofuels Production, 2012-01-29 In the United States we have come to depend on plentiful and inexpensive energy to support our economy and lifestyles In recent years many questions have been raised regarding the sustainability of our current pattern of high consumption of nonrenewable energy and its environmental consequences Further because the United States imports about 55 percent of the nation's consumption of crude oil there are additional concerns about the security of supply Hence efforts are being made to find alternatives to our current pathway including greater energy efficiency and use of energy sources that could lower greenhouse gas GHG emissions such as nuclear and renewable sources including solar wind geothermal and biofuels The United States has a long history with biofuels and the nation is on a course charted to achieve a substantial increase in biofuels Renewable Fuel Standard evaluates the economic and environmental consequences of increasing biofuels production as a result of Renewable Fuels Standard as amended by EISA RFS2 The report describes biofuels produced in 2010 and those projected to be produced and consumed by 2022 reviews model projections and other estimates of the relative impact on the prices of land and discusses the potential environmental harm and benefits of biofuels production and the barriers to achieving the RFS2 consumption mandate Policy makers investors leaders in the transportation sector and others with concerns for the environment economy and energy security can rely on the recommendations provided in this report

Environmental Hazards and Resilience Dennis J. Parker, Edmund C. Penning-Rowsell, 2021-08-26 Building resilience to the world's increasingly damaging environmental hazards has become a priority This book considers the scientific advances which have been made around the world to enhance this resilience Although resilience is not new it is through the idea of resilience that governments organisations and communities around the world are now seeking to address the rapidly increasing losses that environmental hazards cause so that fewer lives are lost and damage is reduced Alternative ideas and approaches have been helpful in reducing loss but resilience offers a fresh and potentially effective means of reducing it further Adopting a scientific approach and scientific evidence is important in applying the resilience idea in hazard mitigation However the science of resilience is at an immature stage of development with much discussion about the concept and how it should be understood and interpreted Building useful theories remains a challenge although some of the building blocks of theory have been developed More attention has been given to developing indicators and frameworks of resilience which are subsequently applied to measure resilience to hazards such as flooding earthquake and climate change Environmental Hazards and Resilience Theory and Evidence considers the scientific and theoretical challenges of making progress in applying resilience to environmental hazard mitigation and provides examples from around the world including the USA New Zealand China Bangladesh and elsewhere The chapters in this book were originally published in the Environmental Hazards

Eklblom, 2019-02-11. Crime Prevention Through Environmental Design (CPTED) is a practice-oriented approach to reduce the risk of offences such as burglary and fear of crime by modifying the built environment. In recent years, this approach has been criticised for duplicating terminology and for failing to integrate successfully with other approaches. *Rebuilding Crime Prevention Through Environmental Design* explores and extends the common ground between CPTED and situational crime prevention, another traditional approach in the field of crime prevention and security via the latter's evolution into the field of crime science. Drawing on international research to develop new interdisciplinary perspectives, this volume explores how situational crime prevention and environmental criminological theories relate to those of Crime Prevention Through Environmental Design and considers how crime science can be reformulated to merge different approaches or at least articulate them better. *Rebuilding Crime Prevention Through Environmental Design* will appeal to students, applied academic researchers and practitioners who wish to deepen their understanding and contribute in turn to the ongoing revitalisation of the field. *Green Business Process Management* Jan vom Brocke, Stefan Seidel, Jan Recker, 2012-06-15. Green Business

Process Management: Towards the Sustainable Enterprise consolidates the global state of the art knowledge about how business processes can be managed and improved in light of sustainability objectives. Business organizations, a dominant part of our society, have always been a major contributor to the degradation of our natural environment through the resource consumption, greenhouse emissions and wastage production associated with their business processes. In order to lessen their impact on the natural environment, organizations must design and implement environmentally sustainable business processes. Finding solutions to this organizational design problem is the key challenge of Green Business Process Management. This book discusses the emerging challenges of designing green business processes, presents tools and methods that organizations can use in order to design and implement environmentally sustainable processes and provides insights from cases where organizations successfully engaged in more sustainable business practices. The book is of relevance to both practitioners and academics who are interested in understanding, designing and implementing green business processes. It also constitutes a valuable resource for students and lecturers in the fields of information systems management and sustainable development. Preface by Richard T. Watson **Water and Health** Prati Pal Singh, Vinod Sharma, 2013-10-01

Fostering Transformative Research in the Geographical Sciences National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Geographical Sciences Committee, Committee on Identifying Transformative Research in the Geographical Sciences, 2019-04-22 The central purpose of all research is to create new knowledge In the geographical sciences this is driven by a desire to create new knowledge about the relations between space place and the anthropogenic and non anthropogenic features and processes of the Earth But some research goes beyond these modest aims and creates new opportunities for further research or affects the process of knowledge acquisition more broadly or changes the way other researchers in a domain think about the world and go about their business Due to its positive impacts transformative research can be regarded as inherently having greater value than more conventional research and funding agencies clearly regard transformative research as something to be encouraged and funded through special programs Assessments of transformative research funding initiatives are few and provide a mixed picture of their effectiveness The challenge is whether transformative research can be identified at the time it is proposed rather than after it has been conducted communicated and its influence on the discipline has become clear *Fostering Transformative Research in the Geographical Sciences* reviews how transformative research has emerged in the past what its early markers were and makes recommendations for how it can be nurtured in the future

Vulnerability and Resilience to Natural Hazards Sven Fuchs, Thomas Thaler, 2018-03-22 In recent years there has been growing recognition that disaster risk cannot be reduced by focusing solely on physical hazards without considering factors that influence socio economic impact Vulnerability the susceptibility to the damaging impacts of hazards and resilience the ability to recover have become popular concepts in natural hazard and risk management This book provides a comprehensive overview of the concepts of

vulnerability and resilience and their application to natural hazards research With contributions from both physical and social scientists it provides an interdisciplinary discussion of the different types of vulnerability and resilience the links between them and concludes with the remaining challenges and future directions of the field Examining global case studies from the US coast to Austria this is a valuable reference for researchers and graduate students working in natural hazard and risk reduction from both the natural and social sciences
