

FAN AND DYNAMO BELT TENSION

Belt tension is correct, if, when it is depressed by hand midway between the fan pulley and the dynamo, the deflection is approximately $\frac{1}{4}$ " (19 mm.). A new belt will 'bed-in' and require re-adjusting after $\frac{1}{2}$ to 1 hour's service.

To tighten the belt, slacken the dynamo securing bolts and swing dynamo outwards. Retighten bolts securely.

Correct belt tension is important because excessive tightness will put an undue stress on water pump and dynamo bearings, looseness will cause loss of friction which will adversely affect both engine cooling and battery charging and, moreover, will quickly ruin the belt.
