International Perspectives on the Teaching and Learning of Geometry in Secondary Schools Patricio Herbst,Ui Hock Cheah,Philippe R. Richard,Keith Jones,2018-04-27 This book presents current

perspectives on theoretical and empirical issues related to the teaching and learning of geometry at secondary schools It contains chapters contributing to three main areas A first set of chapters examines mathematical epistemological and curricular perspectives A second set of chapters presents studies on geometry instruction and teacher knowledge and a third set of chapters offers studies on geometry thinking and learning Specific research topics addressed also include teaching practice learning trajectories learning difficulties technological resources instructional design assessments textbook analyses and teacher education in geometry Geometry remains an essential and critical topic in school mathematics As they learn geometry students develop essential mathematical thinking and visualization skills and learn a language that helps them relate to and interact with the physical world Geometry has traditionally been included as a subject of study in secondary mathematics curricula but it has also featured as a resource in out of school problem solving and has been connected to various human activities such as sports games and artwork Furthermore geometry often plays a role in teacher preparation undergraduate mathematics and at the workplace New technologies including dynamic geometry software computer assisted design software and geometric positioning systems have provided more resources for teachers to design environments and tasks in which students can learn and use geometry In this context research on the teaching and learning of geometry will continue to be a key element on the research agendas of mathematics educators as researchers continue to look for ways to enhance student learning and to understand student thinking and teachers decision making

Inequality for All William Schmidt,Curtis McKnight,2015-04-17 Inequality for All makes an important contribution to current debates about economic inequalities and the growing achievement gap particularly in mathematics and science education The authors argue that the greatest source of variation in opportunity to learn is not between local communities or even schools but between classrooms They zero in on one of the core elements of schooling coverage of subject matter content and examine how such opportunities are distributed across the millions of school children in the United States Drawing on data from the third TIMMS international study of curriculum and achievement as well as a six district study of over 500 schools across the United States they point to Common Core State Standards as being a key step in creating a more level playing field for all students William H Schmidt is University Distinguished Professor at Michigan State University and co director of the Education Policy Center Curtis C McKnight is emeritus professor of mathematics at the University of Oklahoma
