The Journal of Education, 1888 **Two-Dimensional Geometries: A Problem-Solving Approach** C. Herbert Clemens, 2019-03-20 This book on two dimensional geometry uses a problem solving approach to actively engage students in the learning process. The aim is to guide readers through the story of the subject while giving them room to discover and partially construct the story themselves. The book bridges the study of plane geometry and the study of curves and surfaces of non constant curvature in three dimensional Euclidean space. One useful feature is that the book can be adapted to suit different audiences. The first half of the text covers plane geometry without and with Euclid's Fifth Postulate followed by a brief synthetic treatment of spherical geometry through the excess angle formula. This part only requires a background in high school geometry and basic trigonometry and is suitable for a quarter course for future high school geometry teachers. A brief foray into the second half could complete a semester course. The second half of the text gives a uniform treatment of all the complete simply connected two dimensional geometries of constant curvature: one geometry for each real number its curvature including their groups of isometries, geodesics, measures of lengths and areas as well as formulas for areas of regions bounded by polygons in terms of the curvature of the geometry and the sum of the interior angles of the polygon. A basic knowledge of real linear algebra and calculus of several real variables is useful background for this portion of the text.

Handbook of Laser Technology and Applications Chunlei Guo, Subhash Chandra Singh, 2021-06-23 This comprehensive handbook gives a fully updated guide to lasers and laser technologies including the complete range of their technical applications. The first volume outlines the fundamental components of lasers: their properties and working principles. Key Features: Offers a complete update of the original bestselling work including many brand new chapters. Deepens the introduction to fundamentals from laser design and fabrication to host matrices for solid state lasers, energy level diagrams, hosting materials, dopant energy levels, and lasers based on nonlinear effects. Covers new laser types including quantum cascade lasers, silicon based lasers, titanium sapphire lasers, terahertz lasers, bismuth doped fiber lasers, and diode pumped alkali lasers. Discusses the latest applications e.g. lasers in microscopy, high speed imaging, attosecond metrology, 3D printing, optical atomic clocks, time resolved spectroscopy, polarization and profile measurements, pulse measurements, and laser induced fluorescence detection. Adds new sections on laser materials processing, laser spectroscopy, lasers in imaging, lasers in environmental sciences, and lasers in communications. This handbook is the ideal companion for scientists, engineers, and students working with lasers including those in optics, electrical engineering, physics, chemistry, biomedicine, and other relevant areas.
