Poster Session *Guidance for quality assurance project plans*, Optimization-Based Energy Management for Multi-energy Maritime Grids Sidun Fang, Hongdong Wang, 2021-04-21. This open access book discusses the energy management for the multi energy maritime grid which is the local energy network installed in harbors, ports, ships, ferries or vessels. The grid consists of generation, storage and critical loads. It operates either in grid connected or in islanding modes under the constraints of both power system and transportation system. With full electrification, the future maritime grids such as all electric ships and seaport microgrids will become maritime multi energy system with the involvement of multiple energy i.e. electrical power, fossil fuel and heating/cooling power. With various practical cases, this book provides a cross disciplinary view of the green and sustainable shipping via the energy management of maritime grids. In this book, the concepts and definitions of the multi energy maritime grids are given after a comprehensive literature survey, and then the global and regional energy efficiency policies for the maritime transportation are illustrated. After that, it presents energy management methods under different scenarios for all electric ships and electrified ports. At last, the future research roadmap are overviewed. The book is intended for graduate students, researchers and professionals who are interested in the energy management of maritime transportation. *Proceedings of the 2023 8th International Conference on Modern Management and Education Technology (MMET 2023)* Hafizoah Kassim, Nadeem Malik, Premkumar Rajagopal, Manjet Kaur Mehar Singh, 2023-11-27. Summary: The OffshoreGrid project proves the financial benefits of building a meshed European grid offshore and outlines two cost efficient designs.

Contents Offshore grids connecting North and Baltic Sea wind farms and electricity consumers can be built substantially cheaper than expected Building hub connections at sea instead of using cables to connect single wind farms individually to the shore will result in lower investment costs of 14 billion Euros Additionally if these hub connections would be combined with an even more interconnected meshed grid the necessary additional costs of 7 billion Euros would be compensated by 16 to 21 billion Euros of additional benefits over 25 years of grid operation
