Knowledge and Special Libraries Suzanne Connolly, James Matarazzo, 2009-11-03 First Published in 1998 Formerly a library was viewed as a place for information storage and information was viewed as simply bits of data Furthermore many wielded information as a tool of power in that those who had more information had more authority It is becoming increasingly clear that shared collective knowledge of an organization is of far greater value than that of each individual's privately held data In view of the librarian's changing profession it has also become clear that they are now being charged with the mission to explore and implement new and innovative methods to encourage sharing and to better manage information The articles selected for this compendium are well thought out and organized and are drawn from the fields of information and library science and business management Since most special libraries are corporate libraries the selections are taken from these different disciplines to provide perspectives from both a business standpoint and an information management one The selections contain many different predictions about libraries and librarians of the future They focus on new roles and highlight the importance of the profession With the rapid growth of technology end users are being inundated with choices They need expert advice from experienced practitioners Currently much of the literature focuses solely on the management of libraries as opposed to environment in which libraries operate The purpose of this reader is to correct that

Streets and Patterns Stephen Marshall, 2004-08-02 There is an emerging consensus that urban street layouts should be planned with greater attention to placemaking and urban design quality while maintaining the conventional transport functions of accessibility and connectivity However it is not always clear how this might be achieved we still tend to have different sets of guidance for main road networks and for local street grids What is needed is a framework that addresses both of these plus main streets that don't easily fit either set of guidance in an integrative manner Streets and Patterns takes up this challenge to create a coherent rationale to underpin today's streets oriented urban design agenda Informed by recent research the book looks behind existing design conventions and beyond immediate policy rhetoric and analyses a range of first principles from Le Corbusier and Colin Buchanan to New Urbanism The book provides a new framework for the design and planning of urban layouts integrating transport issues such as road hierarchy arterial streets and multi modal networks with urban design and planning issues such as street type grid type mixed use blocks and urban design coding
