Neurodevelopmental Outcomes of Preterm Birth Chiara Nosarti, Robin M.

Murray, Maureen Hack, 2010-04-08 The improved survival of very preterm and very low birth weight infants in recent decades has been associated with an increase in the prevalence of physical and neurodevelopmental problems. Attention is increasingly being focused on the quality of life of survivors who are at greater risk of brain damage and consequent neurological disorders and neuropsychological and behavioural impairments. In this volume leading experts present a comprehensive and up to date perspective on research in various aspects of the long term consequences of very preterm birth. As well as extending existing knowledge of the neurodevelopmental sequelae following very preterm birth, a shared aim of this burgeoning body of research is to identify the mechanisms underlying variations in outcome and thus recognise subgroups of children who are at increased risk of neurodevelopmental problems for whom appropriate intervention strategies can be devised. Pediatricians, neurologists, psychiatrists and psychologists will all find this to be essential reading.

Physiotherapy and Occupational Therapy for People with Cerebral Palsy Karen Dodd, Christine Imms, Nicholas F.

Taylor, 2010-03-08 This book is a practical resource for physiotherapists and occupational therapists who support people with cerebral palsy, helping them to solve the problems with movement and other impairments that so often accompany cerebral palsy so that they can be more active and better able to participate in roles such as study, work, recreation and relationships. The first chapters provide the background to the clinical reasoning approach that informs the whole text, as well as an overview of therapeutic interventions. The subsequent chapters present clinical situations that therapists will encounter in the course of their work with individuals with cerebral palsy across the lifespan. Each chapter describes a case in detail, including the reasoning behind assessment and treatment choices, interventions and outcomes. The themes emphasized throughout the book are the use of the clinical reasoning approach, of the intervention process model, the International Classification of Functioning, Disability and Health as a framework to help therapists inform patient and family decision making, family centred approaches in developing and implementing therapeutic strategies and multidisciplinary team work.
