

# OPERATING YOUR HUMIDIFIER

## HE225A,HE265A

Your Enviracaire Elite™ HE225A and HE265A Humidifiers from Honeywell are controlled by the H8908B Convertible Humidity Control. The convertible humidity control is installed either on an interior wall in the living area, or on the return air duct. Choose the humidity control setting using the combination relative humidity/outdoor temperature setting scale on your humidity control dial. Match the dial setting to the outdoor temperature for optimizing the humidity level while reducing moisture condensation on your windows. The table below can also be used to adjust humidity control to the recommended setting.

| At Outside Temperature | Recommended Control Setting | At Outside Temperature | Recommended Control Setting |
|------------------------|-----------------------------|------------------------|-----------------------------|
| -20°F (-29°C)          | 15                          | +10°F (-12°C)          | 30                          |
| -10°F (-23°C)          | 20                          | +20°F (-7°C)           | 35                          |
| 0°F (-18°C)            | 25                          | Above 20°F (-7°C)      | 40                          |

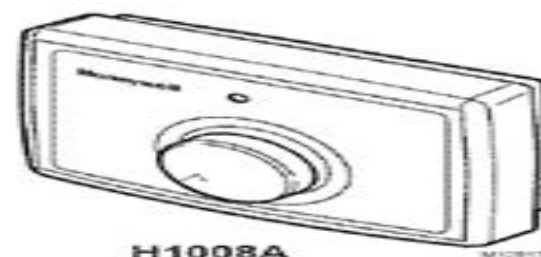

**NOTE:** As outside temperature drops, the recommended humidity control setting is lowered to adjust for effects of dewpoint. These settings should reduce accumulation of moisture and ice on your windows and other areas of your home.

Some indoor activities such as cooking, showering and clothes drying can cause excessive levels of humidity and start the accumulation of moisture on your windows.

**NOTE:** If this condition persists for more than a few hours, set the humidity control to the lowest setting to turn off the humidifier. If the condition does not improve, ventilate your home to remove the moisture.

## HE225B,HE265B

Your Enviracaire Elite™ HE225B and HE265B Humidifiers are controlled by the Honeywell H1008 Automatic Humidity Control with HumidCalc+™. The automatic humidity control is mounted in the return air duct where it can be exposed to the air stream of the return air.

local use or export often lack the capital to build high cost dry kilns Many of these countries are in the tropics where solar  
radiation and ambient temperatures are high The low cost solar wood energy lumber dry kiln described in this report was  
designed and tested by the Forest Products Laboratory FPL for such countries where solar dry kilns can be built and  
operated at low cost The FPL design is for a 6 000 fbm capacity kiln having an insulated drying compartment an external  
horizontal solar collector and a furnace room containing a wood burner Capacities larger or smaller than 6 000 fbm are also  
possible This design allows collector and wood burner sizing to match the energy demands of the dryer The design also  
incorporates low cost controls that allow unattended drying when operated as a solar only dryer Manual firing is necessary
