

Hydril GK® Annular Blowout Preventers

Cutaway View of Screwed Head GK BOP With Packing Unit Fully Open

The GK Annular Blowout Preventer was designed especially for surface installations and is also used on offshore platforms and subsea. The GK is a universal annular blowout preventer with a long record of proven, quality performance.

Only Two Moving Parts (piston and packing unit) on the Hydril Annular BOP mean few areas are subjected to wear. The BOP is safer and more efficient, requiring less maintenance and less downtime.

A Long Piston with a length to diameter ratio approaching one eliminates tendencies to cock and bind during operations with off-center pipe or unevenly distributed accumulations of sand, cuttings, or other elements. This design enhances the ability of the packing unit to reopen to full bore position.

The Conical Bowl Design of the Piston provides a simple and efficient method of closing the packing unit. With the piston serving as a sealing surface against the rubber packing unit, there is no metal-to-metal wear on the sealing surface and thus longer life results.

A Field Replaceable Wear Plate in the BOP Head serves as an upper non-sealing wear surface for the movement of the packing unit, making field repair fast and economical.

Maximum Packing Unit Life is possible with the provision

for measuring piston stroke. This measurement indicates remaining packing unit life without disassembly and ensures the longest and safest use of the packing unit.

Two Choices of Packing Unit Rubber Compounds permit more flexible applications.

The Screwed Head Design of the GK BOP is a simple, efficient, and strong method of connecting the head to the body for safe operation with no loose parts to be lost down the hole or overboard.

The Latched Head Design is available on the GK, 13-5/8"-5000 and larger BOPs. It provides fast access to packing units and seals for minimum downtime with no loose parts to be lost down hole or overboard.

Large Pressure Energized Seals are used for dynamically sealing piston chambers to provide safe operation, long seal life, and less maintenance.

Piston Sealing Surfaces Protected by Operating Fluid lowers friction and protects against galling and wear to increase seal life and reduce maintenance time.

The Operating Chambers are Tested to Full BOP Working Pressure to ensure strength, reliability, and the ability to over-pressurize the chambers in emergencies.

Meets NACE MR-01-75 Material Standards for resistance to sulfide stress cracking.
