## Oceans/Ocean Floor Lab

*Instructions: Examine the pictures below. You will need to print out this lab and then complete.*

*How did scientist use their knowledge of seafloor spreading and magnetic field reversals to reconstruct Pangaea? Try this activity to see how you can determine where a continent may have been located in the past.*

### What You'll Investigate

Can you use clues, such as magnetic field reversals on Earth, to help reconstruct Pangaea?

### Materials

metric ruler

pencil

### Goals

- Interpret data about magnetic field reversals. Use these magnetic clues to reconstruct Pangaea.

### Procedure

1. Study the magnetic field graph below. You will be working only with normal polarity readings, which are the peaks above the baseline in the top half of the graph.
2. Place the long edge of a ruler vertically on the graph. Slide the ruler so that it lines up with the center of peak 1 west of the ridge.
3. Determine and record the distance and age that line up with the center of peak 1 east of the ridge. Repeat this process for peak 1 east of the ridge.
4. Calculate the average age and distance for this pair of peaks.
5. Repeat steps 2 through 4 for each remaining pair of normal-polarity peaks.
6. Calculate the rate of movement in cm per year for the six pairs of peaks. Use the formula  $\text{rate} = \text{distance}/\text{time}$ . Convert kilometers to centimeters. For example, to calculate a rate using normal-polarity peak 5, west of the ridge:

$$\begin{aligned}\text{rate} &= \frac{125 \text{ km}}{10 \text{ million years}} = \frac{12.5 \text{ km}}{\text{million years}} \\ &= \frac{1,250,000 \text{ cm}}{1,000,000 \text{ years}} = 1.25 \text{ cm/year}\end{aligned}$$

**Reconstructing Earth's Climate History** Kristen St. John, R. Mark Leckie, Kate Pound, Megan Jones, Lawrence Krissek, 2021-09-27 Reconstructing Earth's Climate History There has never been a more critical time for students to understand the record of Earth's climate history as well as the relevance of that history to understanding Earth's present and likely future climate There also has never been a more critical time for students as well as the public at large to understand how we know as much as what we know in science This book addresses these needs by placing you the student at the center of learning In this book you will actively use inquiry based explorations of authentic scientific data to develop skills that are essential in all disciplines making observations developing and testing hypotheses reaching conclusions based on the available data recognizing and acknowledging uncertainty in scientific data and scientific conclusions and communicating your results to others The context for understanding global climate change today lies in the records of Earth's past as preserved in archives such as sediments and sedimentary rocks on land and on the seafloor as well as glacial ice corals speleothems and tree rings These archives have been studied for decades by geoscientists and paleoclimatologists Much like detectives these researchers work to reconstruct what happened in the past as well as when and how it happened based on the often incomplete and indirect records of those events preserved in these archives This book uses guided inquiry to build your knowledge of foundational concepts needed to interpret such archives Foundational concepts include interpreting the environmental meaning of sediment composition determining ages of geologic materials and events supported by a new section on radiometric dating and understanding the role of CO<sub>2</sub> in Earth's climate system among others Next this book provides the opportunity for you to apply your foundational knowledge to a collection of paleoclimate case studies The case studies consider long term climate trends climate cycles major and or abrupt episodes of global climate change and polar paleoclimates New sections on sea level change in the past and future climate change and life and climate change and civilization expand the book's examination of the causes and effects of Earth's climate history In using this book we hope you gain new knowledge new skills and greater confidence in making sense of the causes and consequences of climate change Our goal is that science becomes more accessible to you Enjoy the challenge and the reward of working with scientific data and results Reconstructing Earth's Climate History Second Edition is an essential purchase for geoscience students at a variety of levels studying paleoclimatology paleoceanography oceanography historical geology global change Quaternary science and Earth system science     Lab Exercises to Invitation T Pb Pinet, 2003-03     Biology , 1987     Scientific and Technical Aerospace Reports , 1995     **Glencoe Earth Science** Ralph M.
