Annual Plant Reviews, Plant Proteomics Christine Finnie, 2008-04-15 The proteome comprises all protein species resulting from gene expression in a cell organelle tissue or organism By definition proteomics aims to identify and characterise the expression pattern cellular location activity regulation post translational modifications molecular interactions three dimensional structures and functions of each protein in a biological system In plant science the number of proteome studies is rapidly expanding after the completion of the Arabidopsis thaliana genome sequence and proteome analyses of other important or emerging model systems and crop plants are in progress or are being initiated Proteome analysis in plants is subject to the same obstacles and limitations as in other organisms but the nature of plant

tissues with their rigid cell walls and complex variety of secondary metabolites means that extra challenges are involved that may not be faced when analysing other organisms. This volume aims to highlight the ways in which proteome analysis has been used to probe the complexities of plant biochemistry and physiology. It is aimed at researchers in plant biochemistry, genomics, transcriptomics and metabolomics who wish to gain up to date insight into plant proteomes, the information plant proteomics can yield and the directions plant proteome research is taking.
