

## Chapter 2. Hints and Homework Solutions

### Exercise 2.1 (page 70)

2.1 1. True

- (a) We can take the sequence  $\{a_n\}$  to be  $\{1/n\}$  and  $\{b_n\}$  to be  $\{1/n^2\}$ . The given series then has both terms  $\leq 1/n$  for all  $n$ .
- (b) Suppose that  $\{a_n\}$  is a sequence that is not  $\mathcal{O}(1/n)$  for the series  $\sum a_n$  to be convergent. Then there exists the constant  $\epsilon > 0$  such that
- (c)  $|a_n| \geq \epsilon$  for all  $n$ . Suppose  $\{a_n\}$  is bounded by  $M$ . Then  $|a_n| \leq M$  for all  $n$ . Then  $|a_n| \geq \epsilon$  for all  $n$  implies that  $|a_n| \geq \epsilon/M$  for all  $n$ . This gives the desired result.

2.2 This procedure agrees with the second convergent criterion of convergence of the sequence  $\{a_n\}$  that we have seen in 2.1. This gives the desired result.

### Exercise 2.2 (page 70)

2.2 (b) We can choose  $\{a_n\}$  to be  $\{1/n\}$  and  $\{b_n\}$  to be  $\{1/n^2\}$ . This is clearly the false. The above result is different result.

*Extensions of Logic Programming* Peter Schroeder-Heister, 1991-02-12 This volume contains finalized versions of papers presented at an international workshop on extensions of logic programming held at the Seminar for Natural Language Systems at the University of Tübingen in December 1989 Several recent extensions of definite Horn clause programming especially those with a proof theoretic background have much in common One common thread is a new emphasis on hypothetical reasoning which is typically inspired by Gentzen style sequent or natural deduction systems This is not only of theoretical significance but also bears upon computational issues It was one purpose of the workshop to bring some of these recent developments together The volume covers topics such as the languages Lambda Prolog N Prolog and GCLA the relationship between logic programming and functional programming and the relationship between extensions of logic programming and automated theorem proving It contains the results of the first conference concentrating on proof theoretic approaches to logic programming

**Rules and Rule Markup Languages for the Semantic Web** Grigoris Antoniou, Harold Boley, 2004-10-20 The Semantic Web is a worldwide endeavor to advance the Web by enriching its content with semantic metainformation that can be processed by inferen enabled Web applications Taxonomies and rules along with their automated reasoning techniques are the main components of Semantic Web ontologies Rule systems are considered to be a major area in the further development of the Semantic Web On one hand rules can specify declarative knowledge in ontology languages expressing constraints or transformations either in conjunction with or as an alternative to description logics On the other hand rules can specify behavioral knowledge enforcing policies or reacting to events changes Finally rule markup languages such as RuleML allow us to publish rules on the Web to process rules in general XML environments as well as special rule engines to exchange rules between different applications and tools via XSLT translators as well as to embed rules into other XML content and vice versa This workshop was dedicated to all aspects of rules and rule markup languages for the Semantic Web RuleML 2004 was the third in a series of workshops that was initiated with the International Semantic Web Conference The previous workshops were held on Sardinia Italy 2002 and on Sanibel Island USA 2003 This year we had 25 submissions of which 11 were accepted as regular papers and another five as short papers describing tools We are grateful to our two invited speakers Mike Dean from BBN and Christine Golbreich from the University of Rennes Our thanks also go to all submitters and reviewers without whom the workshop and these proceedings could not have succeeded

*Questions and Rhetoric in the Greek New Testament* Douglas Estes, 2017-03-28 While there are almost 1000 questions in the Greek New Testament many commentators pastors and students skip over the questions for more theological verses or worse they convert questions into statements to mine them for what they are saying theologically However this is not the way questions in the Greek New Testament work and it overlooks the rhetorical importance of questions and how they were used in the ancient world Questions and Rhetoric in the Greek New Testament is a helpful and thorough examination of questions in the Greek New Testament seen from the standpoint of grammatical semantic and linguistic analysis with special emphasis

on their rhetorical effects It includes charts tools and lists that explain and categorize the almost 1000 questions in the Greek New Testament Thus the user is able to go to the section in the book dealing with the type of question they are studying and find the exegetical parameters needed to understand that question Questions and Rhetoric in the Greek New Testament offers vibrant examples of all the major categories of questions to aid the reader in grasping how questions work in the Greek New Testament Special emphasis is given to the way questions persuade and influence readers of the Greek New Testament

**Proceedings of the Workshop on Cognitive Social Sciences** Ron Sun, *Computable Foundations for Economics* K. Vela Velupillai, 2012-07-26

Computable Foundations for Economics is a unified collection of essays some of which are published here for the first time and all of which have been updated for this book on an approach to economic theory from the point of view of algorithmic mathematics By algorithmic mathematics the author means computability theory and constructive mathematics This is in contrast to orthodox mathematical economics and game theory which are formalised with the mathematics of real analysis underpinned by what is called the ZFC formalism i e set theory with the axiom of choice This reliance on ordinary real analysis and the ZFC system makes economic theory in its current mathematical mode completely non algorithmic which means it is numerically meaningless The book provides a systematic attempt to dissect and expose the non algorithmic content of orthodox mathematical economics and game theory and suggests a reformalization on the basis of a strictly rigorous algorithmic mathematics This removes the current schizophrenia in mathematical economics and game theory where theory is entirely divorced from algorithmic applicability for experimental and computational exercises The chapters demonstrate the uncomputability and non constructivity of core areas of general equilibrium theory game theory and recursive macroeconomics The book also provides a fresh look at the kind of behavioural economics that lies behind Herbert Simon's work and resurrects a role for the noble classical traditions of induction and verification viewed and formalised now algorithmically It will therefore be of particular interest to postgraduate students and researchers in algorithmic economics game theory and classical behavioural economics

Faith and Humility Jonathan L. Kvanvig, 2018-05-12 This book is devoted to articulating the connections between the nature and value of faith and humility The goal is to understand faith and humility in a way that does not discriminate between religious and mundane contexts between sacred and secular It arises from a conviction that these two character traits are important to a flourishing life and intimately related to each other in such a way that the presence of one demands the presence of the other In particular the book defends the claim that each of these virtues provides a necessary compensating balance to the potential downside of the other virtue The result of such an inquiry if that inquiry is successful will require a re-orienting of discussions surrounding faith including debates about the relationship between faith and reason
