Managerial Accounting Case Study

Cost of quality is an important facet of the managerial accounting process that seeks to evaluate the cost of inefficiencies and inadequacies in the production process of an organization. Though a complex phenomenon, it widely instruments in the accounting process of the costs of corporate inefficiencies. For optimal costing system, the prevention of quality costs remains an essential aspect. However, the changing dynamics and levels of cost of quality are an important measure of the success and progress of the organization. The complex autonomy of the Industrial Systems Division of Texas Instruments (TI) however required a standard system of cost of quality to monitor the efficiency of its various department and processes. (Garrison, Noreen, Brewer, 2007)

Generally, functional optimal cost of quality system for the organization was an important factor towards its competitive portfolio within the market that was subjectively competitive. However, success in COQ management requires adequate planning in all the related departments. Such an improvement can be initiated through corporate management process such as just-in-time processes, planning and also implementation of factory processes and procedures and to restructure the system of the corporate process management. (Garrison, Noreen, Brewer, 2007)

However, the latest concern in the analysis and measurement of COQ is shifting its emphasis towards on-time delivery and cycle time processes that are seen as the most influential in the COQ platform. To ensure this success, a complimentary role on the effectiveness of both assets and the worker force should be instituted. This is attributed after the realization of the possible benefits that
