**The Geography of Manitoba** John Welsted, John Everitt, Christoph Stadel, 1996-03-15 Manitoba is more than one of Canada's three prairie provinces. Encompassing 649 950 square kilometres its territory ranges from Canadian Shield to grassland parkland and subarctic tundra. Its physical geography has been shaped by ice age glaciers while its human geography reflects the influences of its various inhabitants from the First Nations who began arriving over 9 000 years ago to its most recent immigrants. This fascinating range of geographical elements has given Manitoba a distinct identity and makes it a unique area for study. *Geography of Manitoba* is the first comprehensive guide to all aspects of the human and physical geography of this unique province. Representing the work of 47 scholars and illustrated with over 200 maps, diagrams and photographs it is divided into four main sections covering the major areas of the province's geography: Physical Background, People and Settlements, Resources and Industry, and Recreation. As well as studying historical developments the contributors to *Geography of Manitoba* analyse recent political and economic events in the province including the effect of federal and provincial elections and international trade agreements. They also comment on future prospects for the province considering areas as diverse as resource management and climatic trends.
