Chapter 1

- List several major **themes** in environmental science. **Water, air quality, and climate change**
- Explain the idea of sustainability and some of its aims.
- Why are scientists cautious about claiming absolute proof of particular theories?
- What is **critical thinking**, and why is it important in environmental science? **Stepping back to examine what you think and why you think it or why someone believes what they do. Acknowledging uncertainty is one part of critical thinking.**
- Why do we use **graphs** and data to answer questions in science? **Publicizing rates of change**
- List several examples of progress in environmental quality.
- Identify several people who helped shape our ideas of resource conservation and preservation - why did they promote these ideas when they did?
- Outline the steps of the scientific methods. **Helps us understand the world and make reasoned decisions.**

1. Observation and evaluation of factors

Restoration includes replanting, agroforestry (products like nuts and fruits w/ sustainable value), monitoring, protecting and rebuilding.

Natural systems – biodiversity, water resources, climate systems, cultural systems of knowledge, technology and ideas that shape the way we use and occupy the environment.

Climate change – Earth retains heat near the surface, that's why it is hot here and not in space. By 2100, the earth temp will rise 3 to 12 degrees Fahrenheit

Clean water – Most critical resource. 40% of the world's population's water demands exceed supplies.

Air quality – China and India air quality is worsening.
