Regenerative Sanitation Thammarat Koottatep, Peter Emmanuel Cooley, Chongrak Polprasert, 2019-02-15 This book proposes Regenerative Sanitation as the next era of sanitation management and attempts to provide a foundation for the study of sanitation on the premise that sanitation is a complex and dynamic system that comprises of social ecological technological and resource systems The preconception is that sanitation will deliver maximal benefits to society only when there exists a cyclical integration of the three subsystems to enable appropriate linkages between technological design and the delivery platform so as to achieve optimal and sustained sanitation solutions It also calls for the rethinking of sanitation to change the narrative towards more progressive trajectories such as resource recovery and reuse rather than just amelioration It explores the contributions to food security livelihood support urban regeneration rural development and even local economies A new paradigm theory and ten principles for ensuring practical and effective sanitation solutions and management is presented In addition is a unique conceptual framework applicable to both developed and developing countries and to all stages processes and cycles of delivering sanitation solutions that could critically evaluate analyse and provide credible adequate and appropriate sanitation solutions All of which culminates in a strategic and practical application platform called Sanitation 4.0 that advocates for total rejuvenation and comprehensive overhaul with eight key strategic considerations for the implementation Regenerative Sanitation A New Paradigm For Sanitation 4.0 is inter and trans disciplinary and encourages collaboration between engineers scientists technologists social scientists and others to provide effective and practical user centred solutions It includes relevant case studies examples exercise and future research recommendations It is written as both a textbook for researchers and students as well as a practitioners guide for policymakers and professionals

Current Developments in Biotechnology and Bioengineering Sunil Kumar, Rakesh Kumar, Ashok Pandey, 2021-06-16 Strategic Perspectives in Solid Waste and Wastewater Management explores conventional and advanced biotechnologies for waste management including socio economic aspects techno economic feasibility models and modeling tools and a detailed life cycle assessment approach in solid waste SW and wastewater WW These innovative technologies are highly applicable to current real world situations The enormous increase in the quantum and diversity of SW and WW including waste materials generated due to human activity and their potentially harmful effects on the environment and public health have led to increasing awareness about an urgent need to adopt novel technologies for appropriate management of both SW and WW While there is an obvious need to minimize the generation of wastes and to reuse and recycle them the technologies for managing such wastes can play a vital role in mitigating problems Besides recovery of substantial energy these technologies can lead to a considerable reduction in the overall waste quantities requiring final disposal which can be better managed for safe disposal in a controlled manner while meeting pollution control standards Outlines appropriate technologies for solid waste and wastewater management systems and their applications Presents and evaluates the Best Available Technology BAT and includes global case studies Provides methods for evaluating the way to use
